Mark Scheme (Results)

October 2018

Pearson Edexcel International
Advanced Subsidiary Level
In Chemistry (WCH01)
Paper 01 Core Principles in Chemistry

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response

## Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.
/ means that the responses are alternatives and either answer should receive full credit.
( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.
Phrases/words in bold indicate that the meaning of the phrase or the actual word is essential to the answer.
ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.
Full marks will be awarded if the candidate has demonstrated the above abilities.
Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

## Section A (multiple choice)

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1}$ | The only correct answer is B <br> A is not correct because 6 HF and $2 \mathrm{H}_{2} \mathrm{O}$ are needed to balance <br> the equation. <br> C is not correct because 6 HF and $2 \mathrm{H}_{2} \mathrm{O}$ are needed to balance <br> the equation. <br> D is not correct because 6 HF and $2 \mathrm{H}_{2} \mathrm{O}$ are needed to balance <br> the equation. (1) |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{2}$ | The only correct answer is B <br> A is not correct because the $0.06 \mathrm{~g} \mathrm{~kg}^{-1}$ is 60 ppm and this can <br> be safely exceeded <br> C is not correct because this equals 6000 ppm <br> D is not correct because this equals 60000 ppm | (1) |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{3}$ | The only correct answer is B | (1) |
|  | $\mathbf{A}$ is not correct because mol chloride $=3 \times 10^{-4}<6 \times 10^{-4}$ |  |
|  | $\mathbf{C}$ is not correct because mol chloride $=4.5 \times 10^{-4}<6 \times 10^{-4}$ |  |
| $\mathbf{D}$ is not correct because mol chloride $=5 \times 10^{-4}<6 \times 10^{-4}$ |  |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{4}$ | The only correct answer is D | (1) |
|  | $\mathbf{A}$ is not correct because the lighter ion is deflected more |  |
|  | B is not correct because the $\mathrm{Fe}^{2+}$ ion has one more electron <br> $\mathbf{C}$ is not correct because the $\mathrm{Fe}^{2+}$ ion has an extra proton |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{5}$ | The only correct answer is C (To make solution $1 / 20$ as <br> concentrated, total volume would be $200 \mathrm{~cm}^{3}$ produced by <br> adding $190 \mathrm{~cm}^{3}$ to $10 \mathrm{~cm}^{3}$ ) <br> A is not correct because this is the dilution factor <br> B is not correct because this is just based on 5-fold increase in <br> volume <br> D is not correct because the final volume would be $210 \mathrm{~cm}^{3}$ | (1) |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{6}$ | The only correct answer is B (There is 0.5 mol NO and each <br> molecule contains 2 atoms so answer is $0.5 \times 2 \times \mathrm{L})$ <br> A is not correct because this is $0.5 \times \mathrm{L}$ <br> C is not correct because this is $(2 / 0.5) \times \mathrm{L}$ <br> D is not correct because this is $15 \times \mathrm{L}$ | (1) |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{7}$ | The only correct answer is C <br> A is not correct because this ignores excess oxygen <br> B is not correct because this assumes all NO and $\mathrm{O}_{2}$ are used <br> up <br> $\mathbf{D}$ is not correct because this assumes $\mathrm{O}_{2}$ is not used up | (1) |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{8}$ | The only correct answer is A <br> B is not correct because $X$ is in Group 4 and this is a Group 6 <br> oxide formula <br> C is not correct because $X$ is in Group 4 and this is a Group 1 <br> oxide formula <br> D is not correct because $X$ is in Group 4 and this is a Group 3 <br> oxide formula | (1) |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{9}$ | The only correct answer is B | (1) |
|  | A is not correct because it counts sub-shells not orbitals <br> $\mathbf{C}$ is not correct because it includes $3 p_{z}$ <br> Dis not correct because it treats the subshells as single |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 0}$ | The only correct answer is A <br> C is not correct because ionic radii decrease across the series <br> the group <br> D is not correct because this is only true for the first 4 <br> elements in the period. | (1) |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 1}$ | The only correct answer is B <br> A is not correct because it is less easy to polarise bromide than <br> iodide ions. <br> C is not correct because potassium ions polarise anions less <br> than lithium. <br> $\mathbf{D}$ is not correct because potassium ions polarise anions less <br> than lithium. | (1) |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 2}$ | The only correct answer is $\mathbf{D}$ <br> A is not correct because it is the mass of $4 \mathrm{H}_{3} \mathrm{PO}_{4}$ divided by the <br> mass of $\mathrm{P}_{4}+5 \mathrm{O}_{2}+\mathrm{P}_{4} \mathrm{O}_{10}+6 \mathrm{H}_{2} \mathrm{O}(\times 100)$ <br> $\mathbf{B}$ is not correct because it is the mass of $4 \mathrm{H}_{3} \mathrm{PO}_{4}$ divided by the <br> mass of $\mathrm{P}_{4}+5 \mathrm{O}_{2}+\mathrm{P}_{4} \mathrm{O}_{10}(\times 100)$ | (1) |
| C is not correct because it is the mass of $\mathrm{P}_{4}+5 \mathrm{O}_{2}$ divided by <br> the mass of $4 \mathrm{H}_{3} \mathrm{PO}_{4}(\times 100)$ |  |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 3 ( a )}$ | The only correct answer is A | (1) |
|  | B is not correct because carbonate ions are not spectators |  |
|  | C is not correct because carbonate ions are not spectators |  |
| D is not correct because HCl is fully ionised |  |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 3 ( b )}$ | The only correct answer is C | (1) |
|  | A is not correct because this uses $1 / 20$ instead of 0.2 |  |
|  | B is not correct because it is based on a $2: 1$ ratio |  |$\quad$.

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 3 ( c )}$ | The only correct answer is C | (1) |
|  | A is not correct because this based on ratio $4.0: 0.2$ |  |
|  | B is not correct because ratio $1: 2$ for $\mathrm{NiCO}_{3}: \mathrm{HCl}$ not used <br> D is not correct because it is twice the amount needed |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 4}$ | The only correct answer is C | (1) |
|  | A is not correct because mol reacting $=0.2$ not 0.4 <br> B is not correct because mass of solution $=200 \mathrm{~cm}^{3}$ and mol <br> reacting $=0.2$ and energy transferred should be divided by <br> number of mol <br> $\mathbf{D}$ is not correct because mass of solution $=200 \mathrm{~cm}^{3}$ and <br> energy transferred should be divided by number of mol |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 5}$ | The only correct answer is B | (1) |
|  | A is not correct because this is $90 \%$ of 30 tonnes of hydrogen <br> $\mathbf{C}$ is not correct because this is $160 \times 6 / 16$ (ie mass $3 \mathrm{H}_{2} /$ mass <br> $\mathrm{CH}_{4}$ ) <br> $\mathbf{D}$ is not correct because this is $60($ the mass of hydrogen) $/ 0.9$ |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 6}$ | The only correct answer is D <br> A is not correct because the name is not based on the longest <br> carbon chain in the monomer | (1) |
| B is not correct because the name is not based on the longest <br> carbon chain in the monomer <br> $\mathbf{C}$ is not correct because this monomer has 7C atoms |  |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 7}$ | The only correct answer is A | (1) |
|  | B is not correct because the Ca: C ratio is inverted <br> $\mathbf{C}$ is not correct because this is related to mass, not mol <br> D is not correct because Ca:C ratio is incorrect |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 8}$ | The only correct answer is $\mathbf{D}$ | (1) |
|  | $\mathbf{A}$ is not correct because only acidified $\mathrm{KMnO}_{4}$ gives this product |  |
|  | B is not correct because only acidified $\mathrm{KMnO}_{4}$ gives this product |  |
| C is not correct because only acidified $\mathrm{KMnO}_{4}$ gives this product |  |  |

(Total for Section A = $\mathbf{2 0}$ marks)

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 19(a)(i) | M1 |  | (3) |
|  | \% of fourth isotope $=18.60$ |  |  |
|  | ALLOW |  |  |
|  | 18.6(0) or $0.186(0)$ used in the calculation, even if not explicitly stated |  |  |
|  | M2 |  |  |
|  | $((64 \times 49.00)+(66 \times 27.90)+(67 \times 4.50))+18.6 \mathrm{x}$ | ((64 x 49.00) |  |
|  | $=65.44$ | $+(66 \times 27.90)$ |  |
|  |  | $+x$ |  |
|  | OR | $=65.44$ |  |
|  | $\frac{((64 \times 49.00)+(66 \times 27.90)+(67 \times 4.50))}{100}$ |  |  |
|  | $=52.79$ |  |  |
|  | $\frac{(65.44-52.789) \times 100}{18.60}=68.016$ |  |  |
|  | OR $\frac{((64 \times 49.00)+(66 \times 27.90)+(67 \times 4.50))}{100}$ |  |  |
|  | $=52.79$ |  |  |
|  | $(65.44-52.79)=12.65$ |  |  |
|  | $\begin{equation*} 18.6 x=12.65 \tag{1} \end{equation*}$ |  |  |
|  | 100 |  |  |
|  | $\begin{aligned} & \text { M3 } \\ & (x=68.016) \end{aligned}$ |  |  |
|  | Isotopic mass $=68$ |  |  |
|  | Final answers of 68.0 / 68.01/68.02 / <br> 68.016 score 2 <br> Correct answer with no working scores max 2 | Isotopic mass to more than 2SF |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :---: | :--- | :---: | :---: |
| 19(a)(ii) | No difference <br> And chemical properties depend on electron(ic) <br> configuration/ <br> electron(ic) structure/ <br> same outer shell electrons <br> ALLOW <br> On number of electrons (which is the same) <br> IGNORE <br> Number of protons is same <br> number of neutrons differs | (1) |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{1 9 ( b ) ( \mathbf { i } )}$ | M1 <br> To accelerate ions / <br> To make ions travel at same speed / <br> ALLOW <br> Just "acceleration" <br> IGNORE <br> To control velocity <br> M2 <br> To select ions travelling <br> in same direction / <br> In one direction / <br> on same path <br> ALLOW <br> In a straight line <br> OR <br> To produce a (fine) beam (of ions) <br> OR <br> To focus ions <br> IGNORE <br> To form ions / to deflect ions / to detect ions / to <br> deviate ions / to concentrate ions <br> Description of other parts of mass spectrometer |  | (2) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :---: | :--- | :---: | :---: |
| $\mathbf{1 9 ( b ) ( i i )}$ | Using <br> a magnetic field / <br> an electromagnet field / <br> a magnet / <br> an electromagnet <br> IGNORE <br> By deflection <br> By their mass <br> By their charge | (1) |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :---: | :--- | :--- | :---: |
| $\mathbf{1 9 ( b ) ( i i i ) ~}$ | Mass/ charge (ratio) | (1) |  |
|  | ALLOW | Mass per electron <br> Mass of charge <br> Mass and charge |  |
|  | Mass to charge ratio / value <br> Mass:charge <br> Mass over charge <br> Mass per (unit) charge <br> Mass divided by charge <br> Mass relative to charge | Mass compared to <br> charge |  |
| IGNORE <br> m/e m/z <br> Charge density |  |  |  |
