

Mark Scheme (Results)

October 2018

Pearson Edexcel International Advanced Level Biology (WBI04) Paper 01 The Natural Environment and Species Survival

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk for our BTEC qualifications. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

If you have any subject specific questions about this specification that require the help of a subject specialist, you can speak directly to the subject team at Pearson.

Their contact details can be found on this link: www.edexcel.com/teachingservices.

You can also use our online Ask the Expert service at www.edexcel.com/ask. You will need an Edexcel username and password to access this service.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with and alternative response.

Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.

/ means that the responses are alternatives and either answer should receive full credit.

() means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.

Phrases/words in **bold** indicate that the <u>meaning</u> of the phrase or the actual word is **essential** to the answer. ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities.

Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

Question Number	Answer	Mark		
1(a)(i)	The only correct answer is B - lipid and protein			
	A is incorrect because water does not contain carbon			
	C is incorrect because water does not contain carbon			
	D is incorrect because water does not contain carbon	(1)		

Question	Answer	Mark
Number		
1(a)(ii)	The only correct answer is A - bacteria and fungi	
	B is incorrect because viruses are not decomposers	
	C is incorrect because maggots are not microorganisms	
	D is incorrect because viruses are not decomposers	(1)

Question	Answer		Additional Guidance	Mark
Number				
1(b)(i)		(high temperatures) { kill microorganisms / denature enzymes / changes shape of active site / eq } ; therefore enzymes { will not be released / will be inactive / eq} ;	1 DO NOT ACCEPT {enzymes start to / microorganisms} denature 2 ACCEPT substrate can no longer bind to active site	
	3.	therefore bonds between {organic molecules / eq} will not be broken down / eq;	3 ACCEPT named bonds and named organic molecules	(2)
		not be broken down / eq ,	organic molecules	(2)

Question	Answer	Additional Guidance	Mark
Number			
1(b)(ii)	 no oxygen (available for microorganisms); 	1 IGNORE less oxygen	
	2. therefore no aerobic respiration;	2 ACCEPT (only) anaerobic respiration	
	 therefore no energy for { chemical reactions / growth of microorganisms } / eq; 	3 ACCEPT less energy	(2)

Question Number	Answer Additional Guidance	Mark
1(b)(iii)	1. (vinegar) { is an acid / is acidic / has a low pH };	
	enzymes are denatured / active site has changed shape / eq; 2. DO NOT ACCEPT {enz to / microorganisms} denatured / eq;	
	3. due to {ionisation of the R groups / changes in bonding within active site / eq};	(2)

Question Number	Answer	Additional Guidance	Mark
1(b)(iv)	idea that presence of salt draws water out of the microorganisms;	1. IGNORE out of food	
	2. by osmosis (out of food or microorganism);	2. IGNORE references to water concentration DO NOT ACCEPT incorrect references to water potential etc	
	dehydrating the microorganisms / no solvent for enzymes / eq;		(2)

Question	Answer	Mark
Number		
2(a)(i)	The only correct answer is C - oxygen	
	A is incorrect because GALP is produced in the light-independent reaction	
	B is incorrect because hydrogen ions form reduced NADP	
	D is incorrect because water is used not produced	(1)

Question	Answer	Mark
Number		
2(a)(ii)	The only correct answer is - D	
	Reduced NADP ATP	
	A is incorrect because carbon dioxide does not come from the light-dependent reaction B is incorrect because the NADP is reduced C is incorrect because carbon dioxide does not come from the light-dependent reaction	(1)

Question	Answer Additional Guidance Mark	rk
Number		
2(b)(i)	1. (µmol) {concentration / moles} of named { substrate / 1. IGNORE amount	
	product }; e.g. glucose, oxygen, GALP, GP,	
	2. (m ⁻²) area of leaf / eq;	
	3. (s ⁻¹) (extent of reaction) in one second / per unit time / eq; 3. ACCEPT explanation of calculating extent of reaction in one second	(3)

Question	Answer	Additional Guidance	Mark
Number			
2(b)(ii)	1. as nitrates (from soil) ;	Penalise { wrong form of nitrogen / formula} once 1. ACCEPT ammonium (ions)	
	taken up (by roots from soil) by active transport;	2. IGNORE diffusion	
	3. {transported / eq} in the {xylem / transpiration stream};		(2)

Question	Answer		Additional Guidance	Mark
Number				
2(b)(iii)			ACCEPT ribulose bisphosphate carboxylase throughout	
	1.	<pre>(nitrogen / nitrates) used to make {chlorophyll / amino acids};</pre>		
	2.	more chlorophyll results in more light absorption / eq;		
	3.	amino acids used to make RUBISCO;		
	4.	RUBISCO catalyses {carbon fixation / eq};	4. ACCEPT description of carbon fixation e.g.binding of carbon dioxide to RuBP	
	5.	(the more nitrogen) the more RUBISCO, the faster the rate of photosynthesis / eq;	5. PIECE TOGETHER ACCEPT a description on	(0)
			increased rate of photosynthesis	(3)

Question	Answer	Additional Guidance	Mark
Number			
3(a)(i)	mutation in bacteria (present in sharks) / (resistant) bacteria		
	taken up (from the water) / eating contaminated food / eq;		(1)

Question Number	Answer Additional Guidance Ma	1ark
3(a)(ii)	idea that (resistant) bacteria can be consumed (in shark meat);	
	increasing the number of resistant bacteria in human population / eq;	
	3. idea that { genes for resistance can be spread to other bacteria / resistant bacteria will outcompete non-resistant bacteria };	
	4. idea that these bacteria cause disease because they cannot be treated (with antibiotics);	(2)

Question	Answer	Additional Guidance	Mark
Number			
3(b)	{ sulfamethoxazole / bacteriostatic antibiotics } prevent the growth of bacteria and { gentamicin / bactericidal antibiotics }	ACCEPT multiplying / reproducing - equiv to growth	
	kill bacteria / eq ;	destroy - equiv to kill	
		IGNORE modes of action given	(1)

Question	Answer	Additional Guidance	Mark
Number			
3(c)(i)	 mRNA will not {bind / eq} to ribosomes ; 		
	 {tRNA will not be able to bind / wrong tRNA will bind / eq} to codons (on mRNA); 		
	3. { wrong / no / eq } amino acids will line up ;	3. ACCEPT translation will not take place / error in translation / incorrect	
		translation / eq	(2)

Question	Answer	Mark
Number		
3(c)(ii)	The only correct answer is C - peptide	
	A is incorrect because ester bonds form during lipid synthesis	
	B is incorrect because glycosidic bonds form during carbohydrate synthesis	
	D is incorrect because phosphodiester bonds do not form during translation	(1)

Question Number	Answer	Additional Guidance	Mark
3(c) (iii)	idea that {human ribosomes are different from bacterial ribosomes / antibiotics cannot bind to human ribosomes};	e.g. human cells have 80S and bacteria have 70S ribosomes, antibiotics bind to only 70S ribosomes	
	idea that enzymes in human cells are different from those in bacteria;		
	3. idea that these antibiotics cannot enter human cells;		
	4. idea that human cells have enzymes that can break down these antibiotics;		(2)

Question Number	Answer	Additional Guidance	Mark
3(d)	 sulfamethoxazole has a similar structure to PABA / eq; therefore binds to dihydropteroate synthetase / reacts with dihydropteroate diphosphate; 	ACCEPT description of similarity e.g. both have an H₂N group attached to a ring structure 2 ACCEPT PABA cannot bind DO NOT ACCEPT dihydropteroic acid	
	 therefore no dihydropteroic acid made; 	 3. PABA and sulfamethoxazole join together (by condensation reaction / by a peptide bond); 4. and this structure cannot {bind to dihydropteroate synthetase / react with dihydropteroate diphosphate}; 	
	idea that there is no {substrate / dihydropteroic acid} to synthesise folic acid;	6. ACCEPT idea that a different molecule will be mad that cannot be converted to folic acid	(3)

Question	Answer	Mark
Number		
3(e)	The only correct answer is D - peptidoglycan	
	A is incorrect because amylopectin is in starch	
	B is incorrect because cellulose is present in plant cell walls	
	C is incorrect because glycogen is a storage molecule	(1)

Question Number	Answer	Additional Guidance	Mark
4(a)	1. (total number of squirrels) = 2 500 000 + 140 000 / 2 640 000 ;		
	2. (percentage) = 5 / 5.3 / 5.303 (%);	2 ACCEPT ecf for (140 000 × 100) ÷ 2 500 000 = 56 (%)	
		NB If no working is shown: 5 / 5.3 / 5.303 (%) scores 2 marks	
		56 (%) scores 1 mark	(2)

Question	Answer	Additional Guidance	Mark
Number			
4(b)		IGNORE refs to numbers of squirrels throughout	
	 idea that areas occupied by red squirrels (in 1945) are occupied by grey squirrels (in 2010); 		
	 idea that areas occupied by red squirrels (in 1945) are occupied by both squirrels (in 2010); 		
	 idea that areas occupied by both squirrels (in 1945) are occupied by grey squirrels (in 2010); 		
		ACCEPT (overall) an increase in	
		distribution of grey squirrels if no	
		other mark points awarded	(3)

Question Number	Answer Additional Guidance	Mark
4(c)(i)	1. competition for food; 2. competition for { space / habitat / shelter / territory / eq }; 1. ACCEPT description IGNORE nutrients 2. ACCEPT description IGNORE niche, mate	
	 3. niches {overlap / eq}; 4. grey squirrels attack red squirrels / eq; 3. DO NOT ACCEPT sa 4. ACCEPT grey squirrels 	els are
	predators	(2)

Question Number	Answer	Additional Guidance	Mark
4(c)(ii)	In the grey squirrels:		
	1. antibodies {bind/eq} to virus;		
	2. (antibodies binding to virus) will result in phagocytosis;	2. ACCEPT opsonisation,	
	3. macrophages destroy virus with enzymes / eq;	agglutination,	
	 (antibodies binding to virus) will {inactivate virus / prevent the binding of virus to host cells / eq}; 	4. DO NOT ACCEPT antibodies {kill / destroy} virus	
	In the red squirrels:		
	5. idea immune system is weaker ;		
	6. no plasma cells to produce antibodies;	6. DO NOT ACCEPT B cells	
	idea that the virus will be able to {infect / destroy / eq} host cells ;		
	8. no killer cells to destroy infected cells / eq;		(4)

Question Number	Answer	Additional Guidance	Mark
*5(a)	DNA sample taken from parents using {blood / hair / skin / faeces / claw / eq};	QWC emphasis on logical sequence 1. I GNORE method of taking DNA from dead tiger	
	2. amplification of the DNA from all three tigers using { PCR / polymerase chain reaction } / eq;3. credit details of PCR;	3. e.g. primers added, different temperatures used for different stages	
	4. DNA cut into fragments using restriction enzymes / eq;5. reference to (gel) electrophoresis;		
	6. credit details of (gel) electrophoresis;7. comparison of the DNA bands from the three tigers;	6. e.g. electric current applied, use of agarose gel	
	-		(6)

Question Number	Answer	Additional Guidance	Mark
5(b)(i)	1. body temperature measured on discovery / eq;		
	2. body temperature decreases (with time after death);	2. ACCEPT body loses heat	
	 (body temperature of dead animal) depends on {ambient temperature / position of body / wounds / eq}; 		
	 idea of {working backwards to estimate time of death / using a cooling curve for appropriate ambient temperature}; 		(3)

Question Number	Answer	Additional Guidance	Mark
5(b)(ii)		NB each set of mps can be	
	1. (state of) rigor ;	credited anywhere in the answer 1. ACCEPT rigor mortis / muscle contraction	
	2. idea of looking at the degree of rigor;	Degree of rigor mortis = 2 marks	
	 idea that (ambient / body) temperature has to be taken into account; 		
	4. idea that this method has time limitations ;	4. e.g. changes in rigor occur in first few hours	
	OR	rew riours	
	5. (stage of) decomposition ;		
	6. idea that decomposition occurs in a specific sequence ;		
	 idea that ambient temperature has to be taken into account; 		
	8. credit details or what would be looked for ;	8. e.g. {decomposers / insects}	
	OR	arrive in specific sequence, body becomes bloated	
	9. (forensic) entomology / the study of insects ;		
	10.idea that insects colonise the body in a specific sequence;		
	11.stage in life cycle depends on ambient temperature;		
	12.credit details of what would be looked for;	12. e.g description of life cycle, eggs collected and hatched for identification	(3)

Question Number	Answer	Additional Guidance	Mark
6(a)	 (atherosclerosis results in) coronary artery being blocked / reduced blood flow in the coronary artery / eq; 		
	heart {cells / tissue / muscle} die as a result of a lack of oxygen / eq;	2. ACCEPT conditions become anaerobic results in heart attack / infarction	
	resulting in lack of oxygen to the brain / eq;		(2)

Question	Answer	Additional Guidance	Mark
Number			
6(b)	 idea that less air can enter {lungs / alveoli / air sacs}; 	1. ACCEPT less oxygen	
	 therefore the oxygen concentration gradient (between lungs and blood) is lower / eq; 		
	 therefore diffusion of oxygen into the blood is reduced / eq; 		(2)

Question Number	Answer	Additional Guidance	Mark
*6(c)	 HIV reduces the activity of the immune system; because the virus destroys {T helper / CD4 } cells; 	QWC emphasis on clarity of expression 1. ACCEPT weakened immune system / reduced T cell count 2. ACCEPT T killer cells destroy infected T helper cells	
	3. idea that TB is resistant to destruction by macrophages ;	3. ACCEPT macrophages destroyed	
	4. idea that antigen presentation to T helper cells is impaired (further);	4. ACCEPT T helper cells are not activated	
	5. therefore { B / T killer } cells cannot be activated / eq ;		
	 no antibodies (from plasma cells) for {opsonisation / agglutination / eq}; 	6. DO NOT ACCEPT kills TB	
	7. no {perforins / enzymes / eq} (from T killer cells) to destroy virus-infected cells ;		
	8. idea that TB is an opportunistic infection ;		
	9. credit description of how TB results in death;	9. e.g. high fever, lung damage, organ failure	(6)

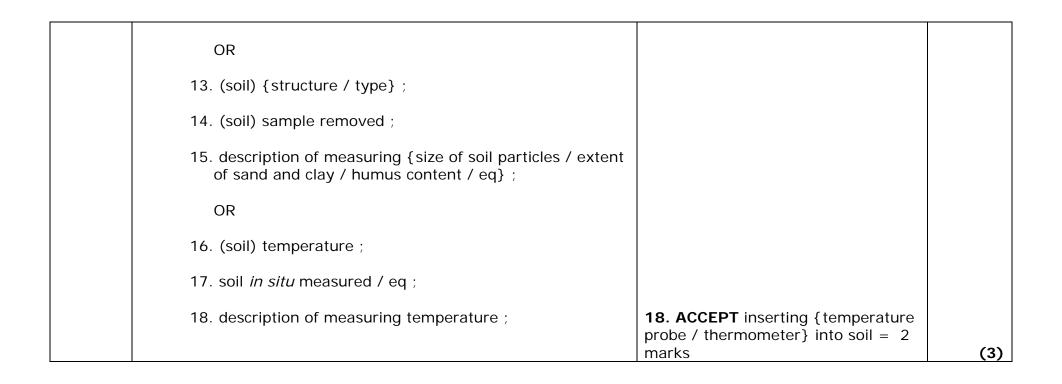

Question	Answer		Mark
Number			
7(a)(i)	The only correct answer is B – 3		
	A is incorrect because statements 1, 2 and 4 relate to topography		
	C is incorrect because statements 1, 2 and 4 relate to topography		
	D is incorrect because statements 1, 2 and 4 relate to topography		(1)
	1 2 13 moon ool bedadse statements 1, 2 and 1 relate to topography		(')
	2 is moorroot because statements 1, 2 and 1 relate to topography		1 (.)
Question		Additional Guidance	Mark
Question Number			

Question	Answer	Additional Guidance	Mark
Number			
7(a)(ii)			
	endemic (species);	ACCEPT endemism	(1)

Question	Answer	Additional Guidance	Mark
Number			
7(b)(i)	1. 3 210 x 27 ÷ 100 ;	1. ACCEPT 866.7 / 867	
		IGNORE 866	
	2. 0.6 / 0.58 / 0.577 ;		
		NB If no working has been shown,	
		0.6 / 0.58 / 0.577 = 2 marks	
		866.7 / 867 = 1 mark	(2)

Question Number	Answer	Additional Guidance	Mark
7(b)(ii)		Descriptions of sowing seeds or planting small plants can score these mps	
	use of a transect / measuring at (minimum 5) different altitudes;	1. ACCEPT long rope	
	2. from {sea level / 0m} to above 2000 m;		
	3. systematic sampling (at points along transect) / eq;	'sample at 0, 500, 1000, 1500, 2000 and 2500m' = mark points 1, 2 and 3	
	4. measuring the height (of the Binara);	4. ACCEPT record height / count number that are 1m high	
	5. of as many (Binara) plants as possible ;	length for height	
	idea that other areas would be looked at if no plants at 1 m in height are found;		(5)

Question Number	Answer	Additional Guidance	Mark
7(b)(iii)	1. (soil) pH;		
	2. (soil) sample removed;		
	credit use of { indicator solution / pH probe / pH meter} ;	ACCEPT inserting probe into soil for 2 marks	
	OR		
	4. (soil) mineral ion content;	4. ACCEPT salinity	
	5. (soil) sample removed;		
	6. credit use of chemical testing kits;		
	OR		
	7. (soil) water / moisture ;		
	8. (soil) sample removed;		
	9. description of determining water content;	9. e.g. moisture {probe / meter}, weighing soil then drying and	
	OR	reweighing ACCEPT inserting probe into soil for 2 marks	
	10.air spaces (in soil);	ZIIIalkS	
	11.(soil) sample removed ;		
	<pre>12.description of measuring { drainage rate / volume with and without air };</pre>		

Question	Answer	Additional Guidance	Mark
Number			
8(a)	 GPP increases and then starts to {level off / increase more slowly / eq} / eq; 	1. ACCEPT GPP increases (throughout) but at different rates	
	2. R increases (throughout) / eq;	2. DO NOT ACCEPT linearly / steadily	
	3. NPP increases and then decreases / eq;	_	(3)

Question Number	Answer	Additional Guidance	Mark
8(b)(i)	 idea that tree is increasing in size so more { ATP / energy } is needed; credit example of what energy is needed for; 	2. e.g. active transport / chemical reactions / mineral ion uptake / new cells / cell division / metabolism	
		IGNORE growth	(2)

Question	Answer Additional Guidance M	1ark
Number		
8(b)(ii)	1. idea that the number of leaves is increasing; 1. ACCEPT more / larger leaves	
	2. therefore greater surface area to absorb more light; 2. ACCEPT more chlorophyll / chloroplasts to absorb light	
	3. more {ATP / reduced NADP} generated in the light-dependent reaction / eq; 3. ACCEPT (non-cyclic) photophosphorylation	
	4. more GALP made in the light-independent reaction / eq; 4. ACCEPT Calvin cycle	
	5. so more {organic matter / protein / biomass / cellulose} synthesised from {GALP / sugar / glucose} / eq;5. ACCEPT more energy converted into {biomass / organic matter}	(3)

Question Number	Answer	Additional Guidance	Mark
8(b)(iii)	1. NPP = GPP - R / eq ;		
	GPP increase is {steady / slow / eq} but R is increasing faster;	2. ACCEPT (with time) increase in R is greater than increase in GPP	
	3. idea that R (continues to) increases as the tree is larger;		
	4. idea that a larger tree requires more { ATP / energy } ;		
	5. idea that although there are more leaves GPP is not increasing (very much);		
	6. because the top leaves are shading the lower leaves;		(4)
