## Mark Scheme (Results)

## January 2018

Pearson Edexcel International Advanced Level In Chemistry (WCH04) Paper 01 General Principles of Chemistry I - Rates, Equilibria and Further Organic Chemistry

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Section A (multiple choice)

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1}$ | The only correct answer is D | (1) |
|  | $\boldsymbol{A}$ is not correct because this is not the half life |  |
| $\boldsymbol{B}$ is not correct because this is not the half life |  |  |
| $\boldsymbol{C}$ is not correct because this is a limiting case of the half life |  |  |$\quad$.

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{2}$ | The only correct answer is C <br> too small to affect the rate as much | (1) |
| $\boldsymbol{B}$ is not correct because the reaction is already in strong acid |  |  |
| and the production of CO2 will not affect pH much (if at all) |  |  |$\quad$| $\boldsymbol{D}$ is not correct because although the statement is correct it |
| :--- |
| has no bearing on the question |$\quad$

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{3 ( a )}$ | The only correct answer is B <br> A is not correct because $P$ is the graph for a first order <br> reaction | (1) |
|  | C is not correct because $R$ is the graph for no reaction <br> $\boldsymbol{D}$ is not correct because $S$ is the graph of reactant <br> concentration against time for a first order reaction |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| 3(b) | The only correct answer is B <br> A is not correct because $P$ is the graph of product <br> concentration against time for a first order reaction | (1) |
|  | $\boldsymbol{C}$ is not correct because this is a graph of rate against time <br> for a zero order reaction | $\boldsymbol{D}$ is not correct because $S$ is the graph of reactant <br> concentration against time for a first order reaction |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{4}$ | The only correct answer is A <br> $\boldsymbol{B}$ is not correct because this is generally true but not a <br> reliable explanation | (1) |
| $\boldsymbol{C}$ is not correct because this is probably true but not a <br> reliable explanation | $\boldsymbol{D}$ is not correct because this is true but does not explain the <br> change with temperature |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{5}$ | The only correct answer is A <br> $\boldsymbol{B}$ is not correct because entropy is expected to increase with <br> the increase in the number of gaseous particles | (1) |
| $\boldsymbol{C}$ is not correct because entropy is expected to increase with <br> the increase in the number of gaseous particles | $\boldsymbol{D}$ is not correct because entropy is expected to increase with <br> the increase in the number of gaseous particles |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{6}$ | The only correct answer is C |  |
| $\boldsymbol{A}$ is not correct because this is true for enthalpy of formation |  |  |
| but not molar entropy |  |  |
| $\boldsymbol{B}$ is not correct because this is incorrect |  |  |
| $\boldsymbol{D}$ is not correct because this is incorrect |  |  |$\quad$ (1) $\quad$.

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{7}$ | The only correct answer is A | (1) |
|  | $\boldsymbol{B}$ is not correct because this is $K_{c}$ for the reverse reaction <br> C is not correct because the expression includes substances <br> in the solid state | $\boldsymbol{D}$ is not correct because the expression includes substances <br> in the solid state |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{8}$ | The only correct answer is A <br> B is not correct because yield decreases as pressure <br> increases <br> $\boldsymbol{C}$ is not correct because yield increases as temperature <br> increases <br> $\boldsymbol{D}$ is not correct because yield increases as pressure <br> decreases and temperature increases | (1) |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{9}$ | The only correct answer is C <br> A is not correct because $K_{p}$ expression depends on the <br> chemical equation | (1) |
| B is not correct because relationship is given the wrong way <br> round <br> $\boldsymbol{D}$ is not correct because a power of 2 should be used, not a <br> factor of 2 |  |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 0}$ | The only correct answer is C | (1) |
|  | $\boldsymbol{A}$ is not correct because $K_{p}$ unaffected by pressure |  |
| B is not correct because $K_{p}$ unaffected by pressure |  |  |
| $\mathbf{D}$ is not correct because when pressure increases, a gaseous |  |  |
| equilibrium shifts towards side with fewer moles |  |  |\(~\left(\begin{array}{l} <br>

\hline\end{array}\right.\)

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 1}$ | The only correct answer is D | (1) |
|  | A is not correct because bases are the wrong way round <br> $\boldsymbol{B}$ is not correct because ethanoic acid is not the acid and <br> $\mathrm{HSO}_{4}^{-}$is the conjugate base of $\mathrm{H}_{2} \mathrm{SO}_{4}$ |  |
| $\boldsymbol{C}$ is not correct ethanoic acid is not the acid |  |  |$\quad$.

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 2}$ | The only correct answer is C <br> $\boldsymbol{A}$ is not correct because litmus is unsuitable for titrations and <br> is a mid-range indicator | (1) |
| B is not correct because methyl orange is used for strong <br> acid weak base titrations | $\boldsymbol{D}$ is not correct because UI is never used as a titration <br> indicator |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 3}$ | The only correct answer is B <br> A is not correct because this is from $10^{-4.76}$ <br> $\boldsymbol{C}$ is not correct because this is calculated using the standard <br> approximations and ignoring the $\left[\mathrm{H}^{+}\right]$due to water | (1) |
|  | $\boldsymbol{D}$ is not correct because this is calculated using the standard <br> approximations and ignoring the $\left[\mathrm{H}^{+}\right]$and omitted to square <br> root $\left[\mathrm{H}^{+}\right]$ |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 4}$ | The only correct answer is B <br> A is not correct because the compound has a geometric <br> isomer | (1) |
| C is not correct because the compound does not have an <br> asymmetric carbon | $\boldsymbol{D}$ is not correct because the compound does not have an <br> asymmetric carbon |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 5}$ | The only correct answer is C <br> A is not correct because aldehydes and ketones form <br> hydrogen bonds with water | (1) |
|  | B is not correct because aldehydes and ketones form <br> hydrogen bonds with water but not in the liquid state |  |
| D is not correct because aldehydes and ketones do not form <br> hydrogen bonds in the liquid state |  |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 6}$ | The only correct answer is D <br> A is not correct because ketones do not react with Tollens' <br> reagent | (1) |
|  | $\boldsymbol{B}$ is not correct because aldehydes and ketones react with <br> $2,4-$ dinitrophenylhydrazine | $\boldsymbol{C}$ is not correct because ketones do not react with Tollens' <br> reagent |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 7}$ | The only correct answer is D <br> A is not correct because butanoic acid is not oxidised by <br> acidified dichromate(VI) | (1) |
| B is not correct because butanoic acid reacts with PCl $_{5}$ but <br> chlorobutane is not the product | C is not correct because the acid product when butyl <br> methanoate is hydrolysed is methanoic acid |  |

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 8}$ | The only correct answer is D | (1) |
|  | $\boldsymbol{A}$ is not correct because they are all isomeric |  |
| $\boldsymbol{B}$ is not correct because they are all isomeric |  |  |
| $\boldsymbol{C}$ is not correct because they are all isomeric |  |  |$\quad$.

| Question <br> Number | Correct Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 9}$ | The only correct answer is A | (1) |
| $\boldsymbol{B}$ is not correct because the central linkage is wrong <br> and not correct because this is derived from butanedioic acid <br> $\boldsymbol{D}$ is not correct because derived from two different <br> monomers |  |  |

## Section B

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 20(a)(i) | $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}(\mathrm{aq}) \rightleftharpoons \mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}(\mathrm{aq})+\mathrm{H}^{+}(\mathrm{aq})$ <br> OR $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}(\mathrm{aq})+\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightleftharpoons \mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}(\mathrm{aq})+\mathrm{H}_{3} \mathrm{O}^{+}(\mathrm{aq})$ <br> ALLOW <br> $\rightarrow$ in place of $\rightleftharpoons$ | $\mathrm{H}_{2} \mathrm{O}(\mathrm{aq})$ | (1) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 0 ( a ) ( i i )}$ | $K_{\mathrm{a}}=\frac{\left[\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}\right]\left[\mathrm{H}^{+}\right]}{\left[\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}\right]}$ <br> OR $\mathrm{H}_{3} \mathrm{O}^{+}$for $\mathrm{H}^{+}$ | Other types of <br> bracket | (1) |
|  | ALLOW <br> $K_{\mathrm{c}}=$ | Omission of $K_{\mathrm{a}}=$ |  |$\quad$.

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 20(a)(iii) | Concentration of a saturated solution of benzenecarboxylic acid at $25^{\circ} \mathrm{C}$ $=3.44 / 122.1=0.028174\left(\mathrm{~mol} \mathrm{dm}^{-3}\right)$ <br> ALLOW $\begin{align*} & 3.44 / 122=0.028197\left(\mathrm{~mol} \mathrm{dm}^{-3}\right)  \tag{1}\\ & \begin{aligned} \mathrm{K}_{\mathrm{a}}= & 10^{-4.2}=6.3096 \times 10^{-5}\left(\mathrm{~mol} \mathrm{dm}^{-3}\right) \end{aligned}  \tag{1}\\ & {\left[\begin{array}{rl} {\left[\mathrm{H}^{+}\right]} & =\sqrt{ }\left(6.3096 \times 10^{-5} \times 0.028174\right) \\ & =1.3333 \times 10^{-3} \\ \mathrm{pH} & =-\log _{10}\left(1.3333 \times 10^{-3}\right) \\ & =2.87508 / 2.88 / 2.9 \end{array}\right.} \tag{1} \end{align*}$ <br> TE at each stage of the calculation <br> Do not penalise premature correct rounding e.g. 0.0282 and $6.31 \times 10^{-5}$ gives $\mathrm{pH}=2.8749=2.87$ <br> If 3.44 is used for the concentration in ( $\mathrm{mol} \mathrm{dm}^{-3}$ ) $\mathrm{pH}=1.83172$ scores (3) <br> No TE on the use of an incorrect expression from (a)(i): max (3) (MP1, MP2, MP4) <br> IGNORE SF except 1 SF <br> Correct answer with no working scores 4 |  | (4) |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 20(a)(iv) | IGNORE explanations |  | (2) |
|  | ALLOW <br> $\left[\mathrm{H}_{3} \mathrm{O}^{+}\right]$for $\left[\mathrm{H}^{+}\right]$throughout |  |  |
|  | First mark: |  |  |
|  | $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH} /$ benzenecarboxylic acid ionisation negligible |  |  |
|  | ALLOW |  |  |
|  | Acid for $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}$ |  |  |
|  | Slight / partial / incomplete / does not dissociate for negligible |  |  |
|  | OR |  |  |
|  | $\begin{align*} & {\left[\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}\right]_{\text {equilibrium }}=\left[\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}\right]_{\text {initial }} /} \\ & 0.0028174\left(\mathrm{~mol} \mathrm{dm}^{-3}\right) \tag{1} \end{align*}$ |  |  |
|  | Second mark: |  |  |
|  | ([ $\mathrm{H}^{+}$] due to) ionisation of water negligible |  |  |
|  | OR |  |  |
|  | $\left[\mathrm{H}^{+}\right.$] only due to ionisation of $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH} /$ |  |  |
|  | (benzenecarboxylic) acid OR |  |  |
|  | $\begin{equation*} \left[\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}\right]=\left[\mathrm{H}^{+}\right] \tag{1} \end{equation*}$ |  |  |
|  | IGNORE references to temperature and to HA and $\mathrm{A}^{-}$ |  |  |
|  | Penalise omission of [] in discussion once only |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 0 ( b ) ( i )}$ | Value in the range 7.3-8.5 (1) |  | (2) |
|  | This solution contains a (dilute) solution <br> of the salt of a weak acid and a strong <br> base / alkali (so has a slightly alkaline <br> pH) <br> OR <br> Reaction is between a weak acid and a <br> strong base / alkali |  |  |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 20(b)(ii) | $\begin{align*} & \text { Mol acid }=25.0 \times 0.0020 \times 10^{-3}=5 \times 10^{-5} \\ & \text { Mol } \mathrm{NaOH}=\mathrm{V} \times 0.0025 \times 10^{-3} \tag{1} \end{align*}$ <br> Neutralisation so these are equal and $\begin{align*} V & =25.0 \times 0.0020 / 0.0025 \\ & =20 \mathrm{~cm}^{3} / 0.020 \mathrm{dm}^{3} \tag{1} \end{align*}$ <br> IGNORE SF <br> Correct answer with no working scores (2) | no / incorrect units | (2) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{2 0 ( b ) ( i i i ) ~}$ | pH of $0.0025 \mathrm{~mol} \mathrm{dm}^{-3} \mathrm{NaOH}$  <br> $\mathrm{pOH}=-\log _{10}\left[\mathrm{OH}^{-}\right]=2.6$  <br> $\mathrm{pH}=\mathrm{pK} K_{\mathrm{w}}-\mathrm{pOH}=14-2.6=11.4$ $(1)$ <br> OR  <br> $K_{w}=1 \times 10^{-14}=\left[\mathrm{H}^{+}\right]\left[\mathrm{OH}^{-}\right]=0.0025\left[\mathrm{H}^{+}\right]$ $(1)$ <br> $\left[\mathrm{H}^{+}\right]=1 \times 10^{-14} / 0.0025=4 \times 10^{-12}$  <br> $\mathrm{pH}=-\log _{10}\left[\mathrm{H}^{+}\right]=11.39794=11.4$  | (2) |  |
|  | 11.4 with no working scores (2) <br> OR <br> Calculation based on specified excess volume <br> of sodium hydroxide <br> IGNORE SF except 1 SF | 11.39 as final <br> answer |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 0 ( c ) ( i )}$ | Standalone marks |  | (2) |
|  | A buffer resists change in pH  <br> OR  <br> Maintains a fairly / nearly constant pH (1) <br> on the addition of small amounts of acid / $\mathrm{H}^{+}$ <br> and of alkali / base $/ \mathrm{OH}^{-}$ "prevents <br> change in $\mathrm{pH"}^{\prime \prime}$ <br> Just 'constant' |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 0 ( c ) ( i i )}$ | In this part of the graph, the pH changes slowly <br> ALLOW <br> This part of the graph is (fairly) flat / horizontal / <br> (nearly) zero gradient (1) | (2) |  |
|  | So the addition (or removal) of alkali / acid has <br> relatively little effect on the pH of the solution (1) | no change in <br> pH |  |
| IGNORE <br> References to half equivalence point |  |  |  |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 20(c)(iii) | If answer based on generalised buffer (HA and $\mathrm{A}^{-}$) score MP2 and 1 mark for MP3 and MP4 (max 2) <br> MP1 <br> $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH} /$ benzenecarboxylic acid / benzoic acid <br> and <br> $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}$/ benzenecarboxylate / benzoate (ion) / $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{(-)} \mathrm{Na}^{(+)} /$sodium benzenecarboxylate <br> MP2 <br> $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}$ and $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}$are present in high concentration / large amount / form a large reservoir <br> and <br> so their values / the concentration ratio do(es) not change significantly (when small amounts of acid or alkali are added) <br> ALLOW <br> Ratio remains constant <br> MP3 <br> When acid is added the $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}$is protonated /reacts, removing the $\mathrm{H}^{+}$ion from the solution / forming $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}$ <br> MP4 <br> When alkali is added the $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}$ is deprotonated / reacts, removing the $\mathrm{OH}^{-}$ion from the solution / forming $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}$/ $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{(-)} \mathrm{Na}^{(+)}$ <br> OR <br> $\mathrm{OH}^{-}$reacts with $\mathrm{H}^{+}$and $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}$ dissociates to replace the $\mathrm{H}^{+}$ <br> For MP3 and MP4: <br> Just "acid reacts with $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COO}^{-}$and alkali reacts with $\mathrm{C}_{6} \mathrm{H}_{5} \mathrm{COOH}^{\prime \prime}$ scores (1) |  | (4) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 0 ( d )}$ | Enzymes are denatured / damaged at high and <br> low pH <br> ALLOW <br> Enzymes do not work at the incorrect pH / only <br> work at correct/optimum pH <br> OR <br> pH affects enzyme activity <br> OR <br> Cells are damaged by high / low pH |  | (1) |

(Total for Question 20 = 23 marks)

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{2 1 ( a ) ( i )}$ | Method 1  <br> P = (aqueous) sodium hydroxide (1) <br> Q = Iodine (in potassium iodide solution) $(1)$ |  | (2) |
| Method 2  <br> P = (aqueous) sodium chlorate(I)  <br> and  <br> Q = (aqueous) potassium iodide (1) |  |  |  |
| ALLOW <br> Reagents labelled the other way round | (1) |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( a ) ( i i i ) ~}$ | Triiodomethane |  | (1) |
|  | ALLOW | $1,1,1$-iodomethane |  |
|  | $1,1,1$-triiodomethane | $1,2,3-$ <br> triiodomethane |  |
|  | Iodoform |  |  |
|  | Triodomethane |  |  |
|  | IGNORE | $\mathrm{CHI}_{3}$ |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| 21(a)(iv) | These are stand alone marks |  | (2) |
|  | Lithium tetrahydridoaluminate((III)) / (1) <br> Lithium aluminium hydride / LiAlH <br> If the oxidation number is given it must be <br> correct <br> ether / ethoxyethane / diethyl ether and (1) <br> essential condition: dry <br> IGNORE Just `ether' <br> Addition of acid |  |  |
| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 1 ( a ) ( v )}$ | Propanal / product is distilled <br> directly/immediately (out of the reaction <br> mixture) | Reflux |  |
| ALLOW <br> Just 'distil' <br> Fractional distillation <br> IGNORE <br> Heat / boil <br> Refs to minimising amount of oxidising <br> agent | (1) |  |  |
| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( a ) ( v i )}$ | Phosphorus(V) chloride / <br> phosphorus pentachloride / $\mathrm{PCl}_{5}$ | OR <br> Phosphorus(III) chloride / <br> phosphorus trichloride / PCl |  |
|  | OR <br> thionyl chloride / $\mathrm{SOCl}_{2}$ |  |  |
| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( a ) ( v i i ) ~}$ | propanamide | N-propanamide <br> ethylamide | (1) |
|  | ALLOW <br> propaneamide <br> propionamide <br> IGNORE <br> $\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{CONH}_{2}$ |  |  |
| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 21(b)(i) | $\begin{align*} & \text { ( } m / e=43 \text { is due to) } \mathrm{CH}_{3} \mathrm{CO}^{+} \\ & \text {IGNORE } \\ & \mathrm{C}_{2} \mathrm{H}_{3} \mathrm{O}^{+}  \tag{1}\\ & \\ & (m / e=29 \text { is due to }) \mathrm{CHO}^{+} / \mathrm{C}_{2} \mathrm{H}_{5}^{+} / \\ & \mathrm{CH}_{3} \mathrm{CH}_{2}+ \\ & \mathrm{ALLOW}^{\mathrm{COH}^{+} / \mathrm{HCO}^{+}} \tag{1} \end{align*}$ <br> Penalise omission of ' + ' charge or use of '-' charge once | $\begin{aligned} & \mathrm{C}_{3} \mathrm{H}_{7}^{+} \\ & \mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{CH}_{2}^{+} \\ & \mathrm{CH}_{2} \mathrm{COH}^{+} \\ & \mathrm{CH}_{2} \mathrm{CHO}^{+} \end{aligned}$ | (2) |
| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 21(b)(ii) | Propanal will have a ( $\mathrm{C}=\mathrm{O}$ stretching peak / absorption) in the range $1740-1720\left(\mathrm{~cm}^{-1}\right)$ OR <br> Propanal will have a (C-H stretching peak / absorption) in the range 2900 to 2820 / <br> 2775 to $2700\left(\mathrm{~cm}^{-1}\right)$ <br> Butanone will have a ( $\mathrm{C}=\mathrm{O}$ stretching peak / absorption) in the range 1700-1680 ( $\mathrm{cm}^{-1}$ ) <br> ALLOW <br> 1720-1710 ( $\mathrm{cm}^{-1}$ ) <br> ALLOW <br> Butanone will not have a ( $\mathrm{C}-\mathrm{H}$ stretching peak/absorption) in the range 2900 to 2820 / 2775 to $2700\left(\mathrm{~cm}^{-1}\right)$ <br> and <br> because butanone does not have an aldehyde C-H <br> If aldehydes and ketones used rather than specific molecules max (1) <br> If propanal and butanone wavenumber are transposed max (1) <br> Penalise once only the use of a specific wavenumber rather than a range |  | (2) |
| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( c ) ( i )}$ | $\left(K_{\mathrm{c}}=\right)\left[\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{COOCH}_{2} \mathrm{CH}_{3}(\mathrm{I})\right]\left[\mathrm{H}_{2} \mathrm{O}(\mathrm{I})\right]$ <br> $\left[\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{COOH}(\mathrm{I})\right]\left[\mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{OH}(\mathrm{I})\right]$ | Other brackets | (1) |
|  | IGNORE state symbols even if incorrect |  |  |
| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( c ) ( i i ) ~}$ | Catalyst | Just 'shifts <br> equilibrium to the <br> right' | (1) |
|  | IGNORE <br> Reference to shifting the equilibrium to the <br> right by absorbing water <br> "speeds up the reaction" by itself |  |  |
| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 21(c)(iii) | Mark this part independently of the expression given in (c)(i). |  | (5) |
|  | Data (see table below) <br> NOTE <br> Mr values may be given as 46.1 and 74.1 |  |  |
|  | (Let volume of the mixture $=\mathrm{V} \mathrm{dm}{ }^{3}$ ) $K_{c}=\frac{(0.11 / V)(2.11 / V)}{(0.14 / V)(0.39 / V)}$ <br> OR an explanation of why moles can be used rather than concentration | V omitted |  |
|  | $\begin{equation*} =4.25092=4.25 \tag{1} \end{equation*}$ | Units given not consistent with $K$ |  |
|  | Correct answer with no use of V (4) |  |  |
|  | IGNORE SF except 1 SF |  |  |
|  | if $K$ is inverted, max (4) |  |  |
|  | if [ $\mathrm{H}_{2} \mathrm{O}$ ] omitted, max (3) for |  |  |
|  | M2, M3 and M5 given as $2.015 \mathrm{dm}^{3} \mathrm{~mol}^{-1}$ OR $2.015 \mathrm{~V} \mathrm{dm}^{3} \mathrm{~mol}^{-1}$ |  |  |
|  | $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{COOH}$ | $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}$ | $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{COOC}_{2} \mathrm{H}_{5}$ | $\mathrm{H}_{2} \mathrm{O}$ | Mark |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Initial mass $/ \mathrm{g}$ | 18.5 | 23 | 0 | 36 | - |
| Initial mol | $18.5 / 74=$ <br> 0.25 | $23 / 46=$ <br> 0.50 | 0 | $36 / 18=2$ | $(1)$ |
| Equil $^{\mathrm{m}} \mathrm{mol}$ | $0.25-0.11$ <br> $=0.14$ | $0.50-0.11$ <br> $=0.39$ | 0.11 | 2.11 | $(2)^{*}$ |
* First mark for calculating 0.11 \& second mark for the rest
| Question <br> Number | Acceptable Answers | Reject | Mark |
