Mark Scheme for June 2018

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

Annotations available in RM Assessor

| Annotation |  | Meaning |
| :---: | :---: | :---: |
| $\checkmark$ | Correct response | Used to indicate the point at which a mark has been awarded (one tick per mark awarded). |
| $\geqslant$ | Incorrect response | Used to indicate an incorrect answer or a point where a mark is lost. |
| AE | Arithmetic error | Do not allow the mark where the error occurs. Then follow through the working/calculation giving full subsequent ECF if there are no further errors. |
| BOD | Benefit of doubt given | Used to indicate a mark awarded where the candidate provides an answer that is not totally satisfactory, but the examiner feels that sufficient work has been done. |
| BP | Blank page | Use BP on additional page(s) to show that there is no additional work provided by the candidates. |
| CON | Contradiction | No mark can be awarded if the candidate contradicts himself or herself in the same response. |
| ECF | Error carried forward | Used in numerical answers only, unless specified otherwise in the mark scheme. Answers to later sections of numerical questions may be awarded up to full credit provided they are consistent with earlier incorrect answers. Within a question, ECF can be given for AE, TE and POT errors but not for XP. |
| L1 | Level 1 | L 1 is used to show 2 marks awarded and $\mathrm{L} 1^{\wedge}$ is used to show 1 mark awarded. |
| L2 | Level 2 | L2 is used to show 4 marks awarded and L2^ is used to show 3 marks awarded. |
| L3 | Level 3 | L3 is used to show 6 marks awarded and L3^ is used to show 5 marks awarded. |
| POT | Power of 10 error | This is usually linked to conversion of SI prefixes. Do not allow the mark where the error occurs. Then follow through the working/calculation giving ECF for subsequent marks if there are no further errors. |
| SEEN | Seen | To indicate working/text has been seen by the examiner. |
| SF | Error in number of significant figures | Where more SFs are given than is justified by the question, do not penalise. Fewer significant figures than necessary will be considered within the mark scheme. Penalised only once in the paper. |
| TE | Transcription error | This error is when there is incorrect transcription of the correct data from the question, graphical read-off, formulae booklet or a previous answer. Do not allow the relevant mark and then follow through the working giving ECF for subsequent marks. |
| XP | Wrong physics or equation | Used in numerical answers only, unless otherwise specified in the mark scheme. Use of an incorrect equation is wrong physics even if it happens to lead to the correct answer. |
| $\wedge$ | Omission | Used to indicate where more is needed for a mark to be awarded (what is written is not wrong but not enough). |

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

| Annotation | Meaning |
| :---: | :--- |
| $/$ | alternative and acceptable answers for the same marking point |
| Reject | Answers which are not worthy of credit |
| Not | Answers which are not worthy of credit |
| Ignore | Statements which are irrelevant |
| Allow | Answers that can be accepted |
| () | Words which are not essential to gain credit |
| - | Underlined words must be present in answer to score a mark |
| ECF | Error carried forward |
| AW | Alternative wording |
| ORA | Or reverse argument |
