## Paper 5 P1H Mark scheme

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 ( a )}$ | An answer that provides a description by making reference <br> to: <br> - transverse waves have oscillations perpendicular to <br> direction of travel of the wave (1) <br> - whereas longitudinal waves have oscillations in the <br> same direction as the direction of travel of the wave (1) |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 ( b ) ( i )}$ | An answer that combines the following points of <br> understanding to provide a logical description: |  |
|  | - take time $T$ for waves to pass a fixed point (1) |  |
| and frequency = number of waves |  |  |
| time taken (1) |  |  |$\quad$

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| (b)(ii) | A | (1) |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| (b)(iii) | D | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(a)(i) | Calculating the mean (1) <br> 18.36 <br> Rounding to 2 s.f. (1) <br> $18(\mathrm{~cm})$ | award full marks for <br> correct numerical answer <br> without working |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(a)(ii) | Rearrangement (1) <br> $t=\sqrt{\frac{\text { distance }}{500}}$ | award full marks for <br> correct numerical <br> answer without working |  |
|  | Substitution and answer (1) <br> time $=0.17(\mathrm{~s})$ | allow answers which <br> round to 0.17, e.g. <br> 0.1673 | (2) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(b) | An explanation that combines <br> identification via a judgement (1 <br> mark) to reach a conclusion via <br> justification/reasoning (1 mark): <br> 25.5 is an anomalous result <br> (1) <br> (because) it is much further <br> away from the mean than the <br> other results (1) | ignore 19 |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 2(c) | - Take more readings (1) <br> Idea that a third student should also measure the <br> reaction time (1) |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 2(d) | An answer that combines the <br> following points to provide a <br> logical description of the <br> plan/method/experiment: <br> - using a larger group of <br> students / large population of <br> students (1) <br> and measure how their <br> reaction time varies with <br> age/height (1) | allow any suitable <br> variable |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(a) | Rearrangement (1) <br> $m=\frac{f}{a}$ <br> substitution and conversion (1) <br> $m=\frac{1870}{1.83}$ <br> answer and rounding to 3 s.f. (1) <br> $1020(\mathrm{~kg})$ | maximum 2 marks if <br> kN not converted to N | award full marks for <br> correct numerical <br> answer without <br> working |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(b) | Rearrangement of $\frac{(v-u)}{t}=a \quad(1)$ <br> $v=u+a t$ <br> Substitution (1) <br> $v=0+1.83 \times 16$ <br> Answer (1) <br> $29.3(\mathrm{~m} / \mathrm{s})$ | award full marks for <br> correct numerical <br> answer without <br> working | (3) |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 3(c) | Correctly identifies data points from the graph to calculate <br> areas (1) <br> Calculates area under AB (1) <br> 240 m |  |
|  | Calculates area under CD (1) <br> 135 m | distance travelled at constant speed $=240 \mathrm{~m}$ is greater than <br> distance travelled when slowing down $=135 \mathrm{~m}(1)$ |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 4(a) | B | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 4(b)(i) | The time taken for the <br> activity of a radioactive <br> nuclide to halve (1) | accept for nuclide: <br> isotope <br> sample | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 4(b)(ii) | Determines number of <br> half-lives and rounds (1) <br> $263 / 87.7=3$ <br> Determines that 3 half-lives <br> is $1 / 2 \times 1 / 2 \times 1 / 2=1 / 8(1)$ | Determines mass of Pu-238 <br> after 3 half-lives (1) <br> $925 / 8=115.625(g)$ | allow repeated division by 2 <br> allow ecf from step 2 for 1 <br> mark <br> (mass of Pu-238 after1 half- <br> life 925/2 $=462.5(g))$ |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 4(c)(i) | An answer that combines the following points of application <br> of knowledge and understanding to provide a logical <br> description: <br> - proton number/atomic number decreases by 1 (1) <br> - nucleon number/mass number remains unchanged (as <br> p and n have same mass and mass of electron is <br> (assumed) negligible) (1) | (2) |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 4(c)(ii) | C | (1) |

| Question number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 5(a) | An answer that combines the following points of understanding to provide a logical description: <br> - measurement of time between(or at) two positions using suitable timing equipment (1) <br> - measurement of suitable distance along the runway with metre rule (1) <br> - measurement of vertical height to starting position (1) <br> - repeats AND averages AND use of a correct equation (1) | allow <br> stopwatch, light gates <br> minimum is 0.5 m metal tape measure <br> average speed $=$ distance/time <br> OR <br> average speed $=$ (speed at A - speed at B)/2 | (4) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(b)(i) | Substitution of correct data <br> from graph and mass <br> conversion (1) | maximum of 1 mark if mass <br> in g used <br> $0.5 \times 0.65 \times(0.61)^{2}$ <br> Answer (1) <br> speed |  |
| $0.12(\mathrm{~J})$ | (2) |  |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{5 ( b ) ( i i )}$ | • Tangent to the graph at <br> $h=0.1(1)$ | either seen on graph or <br> Answer in the region 3.5 to <br> 3.6 | and $\Delta h$ |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{5 ( b ) ( i i i ) ~}$ | An answer that combines points of interpretation/evaluation <br> to provide a logical description: | for each change in height, as the height increases the <br> speed of the trolley increases <br> the greatest change in speed is between the change in <br> height from 0.04 m to 0.9 m |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(c) | An answer that combines <br> the following points to <br> provide a logical description <br> of the <br> plan/method/experiment: <br> - identifies control <br> variables (1) <br> - uses at least 3 different <br> surfaces (1) <br> calculates average speed <br> for each surface and <br> repeats (1) | constant height, constant <br> slope, constant starting <br> points and same length of <br> surface |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{6 ( a )}$ | An explanation that makes <br> reference to: identification - <br> knowledge (1 mark) and <br> reasoning /justification - <br> knowledge (1 mark): <br> - the wavelength <br> decreases because <br> wavelength is the ratio <br> of wave velocity to <br> frequency (1) <br> and the wave velocity <br> reduces at the boundary <br> but the frequency <br> remains the same (1) | allow the same number of <br> waves per second arrive at <br> the boundary as leave it <br> for no change in frequency <br> at the boundary | (2) |

| Question number | Indicative content | Mark |
| :---: | :---: | :---: |
| 6(b) | Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme. <br> The indicative content below is not prescriptive and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant. <br> AO1 (6 marks) <br> - point $A$ reaches the glass block before point $B$ <br> - A moves into the glass block and slows down <br> - as light travels more slowly in glass than in air <br> - $B$ is still in air so is travelling faster than $A$ <br> - this causes part of the wavefront to change direction/refract <br> - by the time B reaches the block it will have travelled further than A <br> - therefore, the whole wavefront changes direction/refracts towards the normal <br> - at the other face, A exits first so the process is reversed <br> - the wavefront changes direction again so it is parallel to its original direction/refracts away from the normal | (6) |

| Level | Mark | Descriptor |
| :--- | :--- | :--- |
|  | 0 | Level 1 |
| Level 2 | $3-2$ | • |
| Leve rewardable material. |  |  |
|  | Demonstrates elements of physics understanding, some of <br> detail. (AO1) <br> Presents an explanation with some structure and <br> coherence. (AO1) |  |
| - 3 | Demonstrates physics understanding, which is mostly <br> relevant but may include some inaccuracies. Understanding <br> of scientific ideas is not fully detailed and/or developed. <br> (AO1) |  |
| Presents an explanation that has a structure which is <br> mostly clear, coherent and logical. (AO1) |  |  |
| -Demonstrates accurate and relevant physics understanding <br> throughout. Understanding of the scientific ideas is detailed <br> and fully developed. (AO1) <br> Presents an explanation that has a well-developed <br> structure which is clear, coherent and logical. (AO1) |  |  |

| Question number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6(c) | Substitution into $v=\frac{s}{t}$ to find $v(1)$ $v=\frac{1.5 \times 10^{11}}{500}$ <br> Substitution into $v=f \times \lambda$ and unit conversion (1) $v=\frac{1.5 \times 10^{11}}{500}=f \times 670 \times 10^{-9}$ <br> Transposition (1) Rearrangement (1) $f=\frac{\left(1.50 \times 10^{11}\right)}{500 \times\left(670 \times 10^{-9}\right)}$ <br> Answer (1) $4.5 \times 10^{14}(\mathrm{~Hz})$ | $s$ is distance <br> award full marks for correct numerical answer without working <br> maximum 3 marks if $\lambda$ in nm $4.4776 \times 10^{14}(\mathrm{~Hz})$ | (4) |
