Mark Scheme (Results)

October 2020

Pearson Edexcel GCE
In Chemistry (8CH0)
Paper 1: Core Inorganic and Physical Chemistry

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.
The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.
/ means that the responses are alternatives and either answer should receive full credit.
( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.
Phrases/words in bold indicate that the meaning of the phrase or the actual word is essential to the answer.
ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities.
Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 1(a) | The only correct answer is C $\left(1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{10} 4 s^{2} 4 p^{6}\right)$ <br> A is not correct because this is the electron configuration of ${ }^{33} \mathrm{As}^{3+}$ <br> $\mathbf{B}$ is not correct because this is the electron configuration of ${ }^{33} \mathrm{As}$ <br> D is not correct because this has added electrons in the $4 d$ orbital | (1) |

| Question <br> Number | Acceptable Answer | Additional Guidance |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( b ) ( i )}$ | An answer that makes reference to the following point: | Answer must refer to spin |
| (1)(up and down arrows represent) electrons with opposite spin <br> or <br> two electrons in the same orbital with opposite spins | Ignore just number of electrons <br> Ignore 'moving / opposite direction' in place of 'spin' <br> Ignore comments re repulsion, same orbital etc |  |

|  | Acceptable Answer | Additional Guidance |
| :--- | :--- | :--- | :---: |
| $\mathbf{1 ( b ) ( i i )}$ | An answer that makes reference to the following point: | (1) |
|  | (three) electrons with parallel / same spin / direction of <br> rotation (because the electrons are in different orbitals) | Allow 'spinning in the same direction' <br> Allow electrons are added into separate orbitals first <br> because of Hund's rule <br> Do not award for just 'direction' of spin, with no <br> reference to 'same' |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 2(a)(i) | The only correct answer is $\mathbf{D} \quad\left(\mathrm{Br}^{+}(\mathrm{g})-\mathrm{e}^{-} \rightarrow \mathrm{Br}^{2+}(\mathrm{g})\right)$ <br> A is not correct because $\operatorname{Br}(\mathrm{g})+\mathrm{e}^{-} \rightarrow \mathrm{Br}^{-}(\mathrm{g})$ is an equation for first electron affinity <br> $\mathbf{B}$ is not correct because $\mathrm{Br}-(\mathrm{g})+\mathrm{e}^{-} \rightarrow \mathrm{Br}^{2-}(\mathrm{g})$ is an equation for second electron affinity <br> $\mathbf{C}$ is not correct because $\mathrm{Br}(\mathrm{g})-2 \mathrm{e}^{-} \rightarrow \mathrm{Br}^{2+}(\mathrm{g})$ is an equation that combines first and second ionisations | (1) |

| Question <br> Number | Answer | Mark |
| :---: | :---: | :---: |
| 2(a)(ii) | The only correct answer is B (801, $2427,3660,25026,32828)$ <br> A is not correct because 738, 1451, 7733, 10 541, 13629 is typical of Group 2 elements <br> C is not correct because 1 086, 2 353, 4 621, 6223,37832 is typical of Group 4 elements <br> D is not correct because 1 402,2 856, 4 578, 7475, 9445 could be for Group 5, 6, 7, 8 or transition elements | (1) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 2(b)(i) | An answer that makes reference to the following points: <br> - Al below Mg but above /equal to Na <br> (1) <br> - rise from Al to Si and then to P <br> and <br> rise from S to Cl to Ar <br> - S below P but above / equal to Si | Example of chart <br> First ionisation energies of the Period 3 elements <br> Allow use of dots (.) or other alternatives to X <br> Ignore any lines connecting the crosses (X) | (3) |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 2(b)(ii) | An answer that makes reference to the following points: <br> - big increase/jump between $1^{\text {st }}$ and $2^{\text {nd }}$ electrons removed and between $9^{\text {th }}$ and $10^{\text {th }}$ electrons removed <br> - one / first electron in the outer most / third shell <br> and <br> eight electrons / electron 2-9 in the next / second shell <br> and <br> two electrons / electrons 10 \& 11 in the inner most/ first shell | Allow answers in terms of energy levels <br> Allow Na is a group 1 element <br> Allow electronic configuration of Na is $2,8,1$ Allow an answer that relates jump in energy to existence of (new) shells <br> Allow there are three shells of electrons | (2) |

(Total for Question $2=7$ marks)

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |  |
| :--- | :--- | :--- | :---: | :---: |
| 3(a)(i) | A description that makes reference to the following points: |  | (2) |  |
|  | - (electrostatic / electric(al)) attraction of (two) nuclei | (1) |  |  |
|  | • with a shared pair $/ 2$ electrons | (1) | Allow a pair of electrons between the nuclei |  |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 3(a)(ii) | - correct dot and cross diagram | Allow diagram with all dots, all crosses, dots and crosses in reversed order, or a mix of dots and crosses <br> Allow non-bonding pairs on N to be shown separated <br> Allow H at any position around N Ignore circles used to show shells Ignore inner electrons if shown Ignore lines representing bonds | (1) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 3(a)(iii) | - bond angle $=107^{\circ}$ | Allow angles in the range 105 to $108^{\circ}$ | (1) |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 3(b) | A diagram and description showing the following points: <br> - any mention of hydrogen bonding $/ \mathrm{H}$-bonds in water, hydrazine or the mixture, in text or diagram <br> - diagram showing hydrogen bond between the correct atoms <br> - lone pair on either nitrogen or oxygen and bond angle shown on diagram as approximately $180^{\circ}$ | Examples of suitable diagrams: <br> Do not award if H bonding clearly within the molecule, e.g. the $\mathrm{O}-\mathrm{H} / \mathrm{N}-\mathrm{H}$ bond is a hydrogen bond <br> Allow more than one H bond <br> Allow description of atoms connected by H-bond Ignore any dipoles <br> Allow bonds involving lone pair on the hydrazine or the water, and hydrogen atoms in hydrazine or water. | (3) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(c) | An answer that makes reference to the following points: <br> - (large quantities of) gases produced (from liquids) | (1) | Allow hydrazine is a liquid <br> Allow nitrogen gas is produced / water vapour/ <br> gas is produced |
| - (formation of strong triple bond in nitrogen) releases a large <br> quantity of energy <br> or <br> hot gases expand <br> or <br> reaction ignites itself <br> or <br> reaction is (very) fast | Ignore just very exothermic <br> Allow non-polluting / non-toxic products / $\mathrm{N}_{2}$ <br> and $\mathrm{H}_{2} \mathrm{O}$ |  |  |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(a)(i) | An answer that makes reference to the following points: <br> - (relative isotopic mass refers to) the mass of an atom of that isotope <br> - (relative atomic mass refers to) the weighted average / mean mass of an atom <br> - (both are) relative to $1 / 12^{\text {th }}$ the mass of a $\mathrm{C}-12$ atom | Penalise omission of 'atom' once only in the answer <br> Do not award any reference to ' average' for relative isotopic mass | (3) |

| Question Number | Acceptable Answer | Additional Guidance |  |  | Mark |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4(a)(ii) | A description that makes reference to the following points: <br> - (atoms with the) same number of protons but different numbers of neutrons <br> - comparison between any 2 or all 3 of the 3 quoted isotopes of potassium, referring to the correct numbers of protons and neutrons | Allow 'atoms with the same atomic number but different mass number’ |  |  | (2) |
|  |  | isotope | number of protons | number of neutrons |  |
|  |  | ${ }^{39} \mathrm{~K}$ | 19 | 20 |  |
|  |  | ${ }^{40} \mathrm{~K}$ | 19 | 21 |  |
|  |  | ${ }^{41} \mathrm{~K}$ | 19 | 22 |  |
|  |  | Example: allow ${ }^{4}$ | K has one m | ee neutron than |  |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(a)(iii) | - correct calculation <br> - evaluation to 4 SF only | Example of calculation: <br> Using relative isotopic mass $\begin{aligned} & \frac{(38.9637 \times 93.218)+(39.9340 \times 0.012)+(40.9618 \times 6.770)}{100} \\ & =39.09908781 \\ & =39.10 \end{aligned}$ <br> Use of $\begin{aligned} & \frac{(39 \times 93.218)+(40 \times 0.012)+(41 \times 6.770)}{100} \\ & =39.13552 \\ & =39.14 \text { scores M2 only } \end{aligned}$ <br> An answer of 39.10/39.1 4 with no working scores (1) Ignore all units | (2) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 4(b)(i) | $\bullet$ (deflection by) (electro)magnetic field | Allow just magnet / electromagnet <br> Allow magnetic / electromagnetic plates <br> Do not award electric field | (1) |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 4(b)(ii) | An answer that makes reference to the following points: <br> - (pathway B), ions are deflected (by the magnetic field (and detected ) <br> - pathway A , ions with greater / higher / larger mass / m/z are deflected less <br> - pathway C, ions with lower / smaller mass / lower $m / z$ are deflected more or ions with greater / higher / multiple charge are deflected more | Penalise 'size' once only <br> Allow answers in terms of 'lighter and heavier' in place of mass <br> Answers may make reference to the three dotted lines shown in the diagram | (3) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 4(b)(iii) | An answer that makes reference to the following point: <br> - to prevent collisions with gas / air molecules / particles (that <br> would deflect the ions) | Allow to prevent collisions/ reaction/interaction with <br> other particles <br> Allow gas/air/other particles could be detected | (1) |

$\left.\begin{array}{|l|l|c|}\hline \begin{array}{l}\text { Question } \\ \text { Number }\end{array} & \text { Answer } & \text { Mark } \\ \hline \mathbf{5 ( a ) ( \mathbf { i } )} & \text { The only correct answer is C (redox) } & \text { (1) } \\ & \mathbf{A} \text { is not correct because chlorine is reduced and iodide is oxidised } \\ & \mathbf{B} \text { is not correct because chlorine is reduced and iodide is oxidised } \\ \mathbf{D} \text { is not correct because different species are oxidised and reduced }\end{array}\right)$.

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{5 ( a ) ( i i )}$ | The only correct answer is A (pale yellow) | (1) |
|  | $\mathbf{B}$ is not correct because the question refers to the aqueous layer |  |
|  | C is not correct because the question refers to the aqueous layer <br> D is not correct because this would be the colour of $\mathrm{Cl}_{2}\left(\right.$ aq) in the absence of $\mathrm{I}_{2}(\mathrm{aq})$ |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{5 ( b ) ( i )}$ | The only correct answer is D (hydrogen iodide, hydrogen sulfide and iodine) | (1) |
|  | $\mathbf{A}$ is not correct because iodide is oxidised to iodine and sulfur is reduced to hydrogen sulfide |  |
|  | $\mathbf{B}$ is not correct because iodide is oxidised to iodine and sulfur is reduced to hydrogen sulfide |  |
|  | $\mathbf{C}$ is not correct because iodide is oxidised to iodine |  |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |  |
| :--- | :--- | ---: | :--- | :---: |
| 5(b)(ii) | An answer that makes reference to the following points: |  |  | (3) |
|  | • white | (1) |  |  |
|  | • smoke | (1) |  |  |
|  | • balanced equation | (1) | $\mathrm{HI}(\mathrm{g})+\mathrm{NH}_{3}(\mathrm{~g}) \rightarrow \mathrm{NH}_{4}+\mathrm{I}^{-}(\mathrm{s})$ <br> $\mathrm{Allow} \mathrm{NH}_{4} \mathrm{I}(\mathrm{s})$ |  |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |  |
| :--- | :--- | :---: | :--- | :---: |
| $\mathbf{5 ( c ) ( i )}$ | An answer that makes reference to the following points. | (1) | Mark independently <br> Ignore addition of extra water <br> Allow give time for potassium iodate to <br> crystallise <br> Ignore the method used to cool the solution, <br> (ice, fridge etc.) | (3) |
|  | • cool (the reaction mixture) | (1) | Ignore any details of the filtration methods |  |
|  | • any suitable method of drying (the resulting solid) | (1) | Examples of methods used to dry: 'leave to <br> dry', warm oven, press between filter <br> papers |  |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 5(c)(ii) | An explanation that makes reference to the following points: | Mark independently | (2) |
|  | - add silver nitrate (solution) $/ \mathrm{AgNO}_{3}\left(\right.$ and $\mathrm{HNO}_{3} /$ nitric acid) <br> (1) <br> yellow <br> and <br> precipitate $/$ ppt/solid/crystals | Do not award hydrochloric acid <br> Allow a correct description of the yellow <br> ppt, e.g. primrose coloured | Do not award 'electrolysis' |

| Question <br> Number | Answer | The only correct answer is B (85 K) |
| :--- | :--- | :---: |
| $\mathbf{5 ( d )}$ | $\mathbf{A}$ is not correct because the Tb trend would suggest approx. $160 \mathrm{K}$. . Therefore 4 K is much too low for fluorine |  |
|  | C is not correct because this figure is derived from the trend in Tm (not Tb), with F placed at the bottom of Group 7 <br> (575 K is the melting temperature of astatine) | Mark |
|  | D is not correct because although this figure is derived from the trend in Tb, F is placed at the bottom of Group <br> 7 (610 K is the boiling temperature of astatine) | (1) |

| Question | Answer | Mark |
| :--- | :--- | :---: |
| Number | The only correct answer is C $(57.5 \%)$ | (1) |
| $\mathbf{6 ( a )}$ | $\mathbf{A}$ is not correct because $40.3 \%$ would be the \% for $\mathrm{CuCO}_{3}(\mathrm{OH})_{2}$ |  |
|  | B is not correct because $51.4 \%$ would be the \% for $\mathrm{CuCO}_{3}$ |  |
|  | D is not correct because $67.9 \%$ would be the \% for $\mathrm{Cu}_{2} \mathrm{CO}_{3}$ |  |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6(b) | An answer that makes reference to the following points: <br> - solid/ malachite/ $\mathrm{Cu}_{2} \mathrm{CO}_{3}(\mathrm{OH})_{2}$ disappears <br> - effervescence <br> - green / blue solution (produced) | Allow dissolves <br> Allow volume of solid reduces <br> Allow fizzes / bubbles <br> Ignore incorrect gas evolved, e.g. hydrogen <br> Ignore just gas / $\mathrm{CO}_{2}$ given off <br> Allow just blue, just green or blue-green | (3) |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6(c)(i) | An answer that makes reference to the following points: <br> - any mention of platinum / nichrome wire / loop <br> - dip the wire into (clean / fresh concentrated) hydrochloric acid <br> - dip the (wet) wire into the solid / sample and place in a (non-luminous / roaring Bunsen) flame | Allow NiCr for nichrome Ignore inoculating / flame-test (wire) / spatula Do not award just nickel / chromium / Ni / Cr wire <br> Allow any mention of $\mathrm{HCl}(\mathrm{aq})$ e.g. cleaning or mixing solid and acid or making a paste / solution <br> Allow HCl for $\mathrm{HCl}(\mathrm{aq})$ <br> Ignore dilute <br> Allow on / over / under / near / show / above for 'in' flame | (3) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6(c)(ii) | An answer that makes reference to the following points: <br> - electrons move up energy levels /are excited /promoted <br> - electrons return to a lower energy level/ground state <br> - energy emitted/lost / released from the atom as visible light / flame colour <br> - different energy gaps / energy lost / emitted / released (in different elements) so different colours emitted. | Penalise use of 'atom' in place of 'electron' once only <br> Allow orbitals/subshells but not just shells <br> Allow radiation for light <br> Allow different amounts of energy are needed to excite the electrons, scores M1 and M4 | (4) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 6(d)(ii) | $\bullet 0.556(\%) / 0.56(\%) / 0.6(\%)$ | Example of calculation: <br> $0.5 / 89.9 \times 100=0.556(\%)$ <br> Allow TE from answer to 6(d)(i) <br> Ignore SF | (1) |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6(d)(iii) | - moles of copper(II) oxide expected (from 0.810 g pure malachite) <br> - mass of copper(II) oxide expected (from 0.810 g pure malachite) <br> - evaluation of answer <br> OR <br> - moles of copper(II) oxide in 0.571 g <br> - moles of copper(II) oxide expected from 0.810 g pure malachite <br> - evaluation of answer <br> OR <br> - calculate mass of $\mathrm{CO}_{2}$ from decomposition of 0.810 g malachite <br> and <br> calculate mass of $\mathrm{H}_{2} \mathrm{O}$ from decomposition of 0.810 g malachite | Example of calculation: | (3) |
|  |  | $\begin{aligned} & 2 \times 3.66(5158371) \times 10^{-3}=7.33(0316742) \times 10^{-3} \\ & (\mathrm{~mol}) \end{aligned}$ |  |
|  |  | $\begin{align*} & 7.33(0316742) \times 10^{-3} \times 79.5  \tag{1}\\ & =0.582(760181)(\mathrm{g}) \\ & (0.583(\mathrm{~g}) \text { scores } 1 \text { and } \mathrm{M} 2) \end{align*}$ |  |
|  |  | $\begin{align*} & \% \text { purity }=\frac{\text { actual mass } \times 100}{\text { expected mass }}  \tag{1}\\ & =\frac{0.571 \times 100}{0.582(760181)}=97.981(98618) \end{align*}$ |  |
|  |  | = 98.0(\% )/ 98(\%) |  |
|  |  | $\begin{equation*} \frac{0.571}{79.5}=7.18(2389937) \times 10^{-3}(\mathrm{~mol}) \tag{1} \end{equation*}$ |  |
|  |  | $\begin{align*} & 2 \times 3.66(5158371) \times 10^{-3}=7.33(0316742) \times 10^{-3}  \tag{1}\\ & (\mathrm{~mol}) \end{align*}$ |  |
|  |  | $\begin{aligned} & \frac{7.18(2389937) \times 10^{-3} \times 100}{7.33(0316742) \times 10^{-3}} \\ & =97.9(8198618) \end{aligned}$ |  |
|  |  | = 98.0(\%) / 98(\%) |  |
|  |  | $\begin{aligned} & 3.66(5158371) \times 10^{-3} \times 44 \\ & =0.161(2669683)(\mathrm{g}) \end{aligned}$ |  |
|  |  | $\begin{aligned} & 3.66(5158371) \times 10^{-3} \times 18 \\ & =0.0659(7285068)(\mathrm{g}) \end{aligned}$ |  |

|  | - calculate total mass of products | $\begin{aligned} & 0.161+0.066+0.571 \\ & =0.798(239819)(\mathrm{g}) \end{aligned}$ |  |
| :---: | :---: | :---: | :---: |
|  | - evaluation of answer | $\begin{align*} & \frac{0.798(239819) \times 100}{0.810}  \tag{1}\\ & =98.5(481258) / 99(\%) \end{align*}$ |  |
|  | OR <br> - calculate moles of CuO in 0.571 g | $\begin{aligned} & 0.571 / 79.5 \\ & =7.18 \times 10^{-3}(\mathrm{~mol}) \end{aligned}$ |  |
|  | - calculate mass of malachite to produce 0.571 g CuO | $\begin{align*} \text { Moles of malachite }= & 7.18 \times 10^{-3} \div 2  \tag{1}\\ & =3.59119 \times 10^{-3}(\mathrm{~mol}) \\ \text { Mass of malachite }= & 3.59119 \times 10^{-3} \times 221 \\ = & 0.79365(\mathrm{~g}) \end{align*}$ |  |
|  | - calculate \% (1) | $\begin{aligned} & \text { Purity }=0.79365 \times 100 / 0.810 \\ & =97.98198618(\%) \\ & =98 / 98.0(\%) \end{aligned}$ |  |
|  |  | Allow TE throughout Correct answer with no working scores 3 marks |  |

(Total for Question 6 = 20 marks)

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 7(a) | An answer that makes reference to the following points: <br> - a trend/pattern of repeating (physical and chemical) properties (with increasing atomic number) <br> - atomic radii decrease from left to right/ across the period <br> - the pattern /atomic radius trend is repeated in period 3 | Do not award for trend in group <br> Allow a sketch of the trend <br> Allow even if the trend is incorrect | (3) |

| Question Number | Acceptable Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| *7(b) | This question assesses a student's ability to show a coherent and logically structured answer with linkages and fullysustained reasoning. <br> Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning. <br> The following table shows how the marks should be awarded for indicative content. |  | Guidance on how the mark scheme should be applied: <br> The mark for indicative content should be added to the mark for lines of reasoning. For example, an answer with five indicative marking points that is partially structured with some linkages and lines of reasoning, scores 4 marks ( 3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning). <br> If there are no linkages between points, the same five indicative marking points would yield an overall score of 3 marks ( 3 marks for indicative content and no marks for linkages). <br> In general it would be expected that 5 or 6 indicative points would get 2 reasoning marks, and 3 or 4 indicative points would get 1 mark for reasoning, and 0,1 or 2 indicative points would score zero marks for reasoning. <br> If there is any incorrect chemistry, deduct mark(s) from the reasoning. If no reasoning mark(s) awarded do not deduct mark(s). <br> Comment: Look for the indicative marking points first, then consider the mark for the structure of the answer and sustained line of reasoning. | (6) |
|  | Number of indicative marking points seen in answer | Number of marks awarded for indicative marking points |  |  |
|  | 6 | 4 |  |  |
|  | 5-4 | 3 |  |  |
|  | 3-2 | 2 |  |  |
|  | 1 | 1 |  |  |
|  | 0 | 0 |  |  |
|  | The following table shows how the for structure and lines of reasonin | he marks should be awarded g. |  |  |
|  |  | Number of marks awarded for structure and sustained lines of reasoning |  |  |
|  | Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout. | 2 |  |  |
|  | Answer is partially structured with some linkages and lines of reasoning. | 1 |  |  |
|  | Answer has no linkages between points and is unstructured. | 0 |  |  |

## Indicative points:

- IP1: at the start of the period / on the LHS / Li to Be the bonding is metallic
- IP2: metallic bonding gets stronger as the number of delocalised electrons in a metal (atom) increases or
metallic bonding gets stronger as radius of cation decreases
or
metallic bonding gets stronger as the charge on the cation increases
- IP3 in the middle of the period / ( B and) C has / have a giant structure of atoms
- IP4 A lot of energy is needed to break (strong) covalent bonds, (in graphite and diamond)
- IP5: at the end of the period / on the RHS / N to Ne are simple molecules
or
$\mathrm{N}_{2}, \mathrm{O}_{2}$ and $\mathrm{F}_{2}$ are simple molecules,
- IP6: weak London forces (between molecules)

$\square$

Ignore statements about boron

Allow a description of a giant structure, e.g. each C atom is bonded to 4 other (in diamond)

Do not award London forces

Ignore reference / lack of reference to Ne unless incorrect

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( a )}$ | - equation for sodium nitrate | (1) | Examples of equations <br> $\mathrm{NaNO}_{3} \rightarrow \mathrm{NaNO}_{2}+1 / 2 \mathrm{O}_{2}$ |
|  | • equation for calcium nitrate1 | (1) | $\mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2} \rightarrow \mathrm{CaO}+2 \mathrm{NO}_{2}+1 / 2 \mathrm{O}_{2}$ <br> Allow multiples of both equations <br> Ignore states even if incorrect |

| Question Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 8(b) | An answer that makes reference to the following points: <br> - thermal stability (of nitrates) depends on the polarising power / charge density of the cation OR <br> $\mathrm{Na}+$ causes more distortion/Cs+ causes less distortion <br> - $\mathrm{Na}^{+}$is a smaller cation / has greater charge density <br> - $\mathrm{Na}^{+}$weakens / distorts electron clouds / (N-O) bonds in the nitrate ion to a greater extent / more than $\mathrm{Cs}^{+}$ | Allow reverse arguments for M2 and M3 <br> Penalise lack of reference to positive ion once only Penalise incorrect charge on ions once only | (3) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| $\mathbf{8 ( c ) ( i )}$ | $\bullet$ correct formulae and state symbols of each species | $\mathrm{CaCO}_{3}(\mathrm{~s}) \rightarrow \mathrm{CaO}(\mathrm{s})+\mathrm{CO}_{2}(\mathrm{~g})$ | (1) |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 8(c)(ii) | ionic <br> and <br> covalent (bonding) | Ignore reference to single/double/dative |  |

| Question <br> Number | Acceptable Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :---: |
| 8(c)(iii) | -strong bonds within the carbonate ion $/ \mathrm{CO}_{3}{ }^{2-} / \mathrm{C}-\mathrm{O}$ bond $/ \mathrm{C}=\mathrm{O}$ <br> bondIgnore bonds between the ions $/\left(\mathrm{Ca}^{2+}\right.$ and <br> $\left.\mathrm{CO}_{3}{ }^{2-}\right)$ are strong | (1) |  |
