# Mark Scheme (Results) 

January 2021

Pearson Edexcel International Advanced
Subsidiary Level
In Chemistry (WCH11)
Paper 1: Structure, Bonding and Introduction to
Organic Chemistry

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## Section A

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1}$ | The only correct answer is B $\left(\mathrm{C}_{3} \mathrm{H}_{8}\right)$ | $\mathbf{1}$ |
|  | $\boldsymbol{A} \quad$ is incorrect because the empirical formula is $\mathrm{CH}_{2}$ |  |
| $\boldsymbol{C} \quad$ is incorrect because the empirical formula is $\mathrm{C}_{2} \mathrm{H}_{5}$ |  |  |
| $\boldsymbol{D} \quad$ is incorrect because the empirical formula is $\mathrm{CH}_{2}$ |  |  |$\quad$.

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{2}$ | The only correct answer is C $\left(\mathrm{BH}_{3}\right)$ | $\mathbf{1}$ |
|  | $\boldsymbol{A} \quad$ is incorrect because there are $1.51 \times 10^{23}$ atoms |  |
| $\boldsymbol{B} \quad$ is incorrect because there are $4.52 \times 10^{23}$ atoms |  |  |
| $\boldsymbol{D} \quad$ is incorrect because there are $7.53 \times 10^{23}$ atoms |  |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{3}$ | The only correct answer is A $\left(0.1 \mathrm{~g} \mathrm{dm}^{-3} \mathrm{HCl}\right)$ | $\mathbf{1}$ |
|  | $\boldsymbol{B} \quad$ is incorrect because HCl has a higher concentration of chloride ions |  |
| $\boldsymbol{C} \quad$ is incorrect because HCl has a higher concentration of chloride ions |  |  |
| $\boldsymbol{D} \quad$ is incorrect because HCl has a higher concentration of chloride ions |  |  |

$\left.\begin{array}{|l|l|c|}\hline \begin{array}{l}\text { Question } \\ \text { number }\end{array} & \text { Answer } & \text { Mark } \\ \hline \mathbf{4} & \text { The only correct answer is } \mathbf{D}\left(\mathrm{CaCO}_{3}+2 \mathrm{NaCl} \rightarrow \mathrm{CaCl}_{2}+\mathrm{Na}_{2} \mathrm{CO}_{3}\right) & \mathbf{1} \\ & \boldsymbol{A} \quad \text { is incorrect because there are no waste products } \\ \boldsymbol{B} \quad \text { is incorrect because } \mathrm{H}_{2} \text { has a lower } \mathrm{Mr}_{r} \text { than } \mathrm{Na}_{2} \mathrm{CO}_{3} \\ \text { C is incorrect because the combined } \mathrm{M}_{r} \text { of } \mathrm{H}_{2} \mathrm{O} \text { and } \mathrm{CO}_{2} \text { is lower than } \mathrm{Na}_{2} \mathrm{CO}_{3}\end{array}\right]$

| Question number | Answer | Mark |
| :---: | :---: | :---: |
| 5 | The only correct answer is B $\left({ }_{50}^{124} \mathrm{Sn}\right)$ <br> A is incorrect because ${ }_{49}^{115}$ In has 66 neutrons <br> C is incorrect because ${ }_{51}^{123} \mathrm{Sb}$ has 72 neutrons <br> D is incorrect because ${ }_{52}^{124} \mathrm{Te}$ has 72 neutrons | 1 |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{6}$ | The only correct answer is $\mathbf{B}\left(1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6}\right)$ | $\mathbf{1}$ |
|  | $\boldsymbol{A} \quad$ is incorrect because this is the electronic configuration of an s-block element |  |
| $\boldsymbol{C} \quad$ is incorrect because this could not be the electronic configuration of the ion of a $p$-block element |  |  |
| $\boldsymbol{D} \quad$ is incorrect because this could not be the electronic configuration of the ion of a Period 3 element |  |  |$\quad$.

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{7}$ | The only correct answer is C (carbon) |  |
|  | $\boldsymbol{A} \quad$ is incorrect because Al is in Period 3 |  |
| $\mathbf{B} \quad$ is incorrect because the element with the highest melting temperature is in Group 4 |  |  |
| $\mathbf{D} \quad$ is incorrect because Si is in Period 3 |  |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{8}$ | The only correct answer is C $(\mathrm{Hg}(\mathrm{l})$ ) |  |
|  | $\boldsymbol{A} \quad$ is incorrect because simple molecules do not conduct electricity |  |
| $\boldsymbol{B} \quad$ is incorrect because simple molecules do not conduct electricity |  |  |
| $\boldsymbol{D} \quad$ is incorrect because ionic compounds do not conduct electricity as solids |  |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{9}$ | The only correct answer is A $\left(N^{3-}\right)$  <br> $\boldsymbol{B}$ is incorrect because $F^{-}$has more protons than $N^{3-}$ so greater nuclear attraction on the outer electrons <br> C is incorrect because $N a^{+}$has more protons than $N^{3-}$ so greater nuclear attraction on the outer electrons <br> D is incorrect because $A \beta^{3+}$ has more protons than $N^{3-}$ so greater nuclear attraction on the outer electrons | $\mathbf{1}$ |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 0}$ | The only correct answer is D $\left(\mathrm{Ca}^{2+}\right)$ | $\mathbf{1}$ |
|  | $\boldsymbol{A} \quad$ is incorrect because anions do not polarise cations |  |
| $\boldsymbol{B} \quad$ is incorrect because anions do not polarise cations |  |  |
| C is incorrect because $\mathrm{K}^{+}$has a smaller charge and a greater ionic radius |  |  |

$\left.\begin{array}{|l|l|c|}\hline \begin{array}{l}\text { Question } \\ \text { number }\end{array} & \text { Answer } & \text { Mark } \\ \hline \mathbf{1 1} & \begin{array}{l}\text { The only correct answer is A (C60 fullerene) } \\ \boldsymbol{B} \\ \text { C is incorrect because the structure of diamond is formed by a giant lattice of carbon atoms }\end{array} & \mathbf{1} \\ \hline & \text { is incorrect because the structure of graphene is formed by a giant lattice of carbon atoms } \\ \text { D is incorrect because the structure of graphite is formed by a giant lattice of carbon atoms }\end{array}\right)$.

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 2}$ | The only correct answer is A (HF) |  |
|  | $\boldsymbol{B} \quad$ is incorrect because there is a relatively small difference in electronegativity between oxygen and fluorine |  |
|  | $\boldsymbol{C} \quad$ is incorrect because $B F_{3}$ is a non-polar molecule |  |
| $\mathbf{D} \quad$ is incorrect because $C F_{4}$ is a non-polar molecule | $\mathbf{1}$ |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 3}$ | The only correct answer is B (corrosive) <br> A is incorrect because this is a precaution and not a hazard <br> $\boldsymbol{C} \quad$ is incorrect because this is a precaution and not a hazard <br> $\boldsymbol{D} \quad$ is incorrect because this is not the symbol for oxidising | $\mathbf{1}$ |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 4}$ | The only correct answer is C (3,4,6-trimethyloctane) <br> $\boldsymbol{A} \quad$ is incorrect because the longest chain of carbon atoms is not seven <br> $\boldsymbol{B}$ <br>  <br>  <br> D is incorrect because the longest chain of carbon atoms is not seven | $\mathbf{1}$ |

| Question number | Answer | Mark |
| :---: | :---: | :---: |
| 15 | The only correct answer is A (burn to produce greenhouse gases) <br> B is incorrect because they are not all carbon neutral <br> C is incorrect because they are not all sustainable <br> D is incorrect because they do not all biodegrade rapidly | 1 |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 6 ( a )}$ | The only correct answer is $\mathbf{D}\left(\mathrm{C}_{5} \mathrm{H}_{10}+\mathrm{Br}_{2} \rightarrow \mathrm{C}_{5} \mathrm{H}_{9} \mathrm{Br}+\mathrm{HBr}\right)$ | $\mathbf{1}$ |
|  | $\boldsymbol{A} \quad$ is incorrect because $\mathrm{C}_{5} \mathrm{H}_{8}$ is the formula of cyclopentene and the reaction is not addition |  |
| $\mathbf{B} \quad$ is incorrect because the reaction is not addition and this product is not formed |  |  |
| $\boldsymbol{C} \quad$ is incorrect because these products are not formed |  |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 6 ( b )}$ | The only correct answer is A (only the initiation step involves homolytic bond fission)  <br> $\boldsymbol{B}$ is incorrect because not all of the bromine is converted to radicals in the initiation step <br> C is incorrect because many more propagation than termination reactions occur <br> D is incorrect because additional substitution products are likely to form | $\mathbf{1}$ |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 6 ( c )}$ | The only correct answer is D $\left(\mathrm{H}^{\bullet}\right)$ | $\mathbf{1}$ |
|  | $\boldsymbol{A} \quad$ is incorrect because $\mathrm{C}_{5} \mathrm{H}_{9} \bullet$ radicals form in propagation reactions |  |
| $\boldsymbol{B} \quad$ is incorrect because $\mathrm{Br} \bullet$ radicals form in propagation reactions |  |  |
| C is incorrect because $\mathrm{C}_{5} H_{8} B r \cdot$ radicals may form in secondary propagation reactions |  |  |

| Question number | Answer | Mark |
| :---: | :---: | :---: |
| 16(d) | The only correct answer is $\mathbf{C}$ <br> A is incorrect because the molecule does not contain 10 carbon atoms <br> B is incorrect because the molecule does not contain 10 carbon atoms <br> D is incorrect because the molecule does not contain 18 hydrogen atoms | 1 |

| Question <br> number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 7}$ | The only correct answer is B (exporting polymer waste) <br> $\boldsymbol{A} \quad$ is incorrect because biodegradable polymers are broken down by microorganisms <br> $\boldsymbol{C} \quad$ is incorrect because this removes harmful pollution <br> $\boldsymbol{D} \quad$ is incorrect because this saves energy and conserves non-renewable resources | $\mathbf{1}$ |

Section B

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 18(c) | An explanation that makes reference to the following points: <br> - outermost electrons in same subshell / (quantum) shell (1) <br> - Cl contains the greatest number of protons / more protons than S | Accept similar/same (electron) shielding <br> Allow same number of shells <br> Allow correct reference to full or partial electronic configurations for two/three elements Do not award incorrect electronic configurations <br> Accept Cl has the greatest nuclear charge Ignore Cl has the greatest nuclear attraction Ignore Cl has the greatest atomic number <br> Do not award just Cl has the greatest charge Do not award S has the smallest nuclear charge Allow Cl has the smallest atomic radius / smaller atomic radius than S <br> Do not award $S$ had the greatest atomic radius <br> Do not award same/similar atomic radius <br> Do not award outer electron same/similar distance from nucleus <br> Do not award ionic/molecular radius <br> There must be a mention of $\mathbf{p}$ (orbital) <br> Allow subshell for orbital <br> Do not award shell for orbital <br> Allow spin-spin repulsion in $p$ orbital/subshell <br> Allow correct reference to stable half-full $p$ subshell: <br> eg stable half-full $p$ subshell in $P$ <br> eg removing electron from $S$ gives stable half-full $p$ subshell <br> Do not award reference to bonding electrons | 3 |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :---: |
| 18(d)(i) | • (atoms with the) same number of protons | Penalise use of species/particles/molecules for atoms once only <br> (1) | Allow same atomic number <br> Allow amount for number <br> Ignore atoms of the same element <br> lgnore electrons |
|  | • (and) different number of neutrons | (1) | Ignore different mass number <br> Do not award different number of electrons |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 18(d)(ii) | - Expression for relative atomic mass <br> - Calculation and answer to two decimal places (1) | Example of calculation: $\begin{aligned} & \left(A_{r}=\right) \frac{32 \times 94.88+33 \times 0.83+34 \times 4.27+36 \times 0.02}{100} \\ & \left(A_{r}=\right) 32.09 \end{aligned}$ <br> TE on transcription errors only (ie no TE on incorrect expression) <br> Ignore units of amu / $\mathrm{g}_{\mathrm{g}}^{\mathrm{gmol}}{ }^{-1}$ <br> Do not award any other unit <br> 32.09 scores (2) provided there is evidence of all four isotopes having been used in the calculation <br> 32.09 with no working scores (1) <br> 32.10 with no working scores (0) <br> 33.75 scores (0) | 2 |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{1 8 ( e ) ( \mathbf { i } )}$ | $\bullet \frac{256}{32}=8$ (atoms) | Allow working shown on mass spectrum <br> Ignore calculations involving the Avogadro constant, even if <br> incorrect <br> Do not award just 8 (with no working) | $\mathbf{1}$ |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 18(e)(ii) | An answer that makes reference to the following points: <br> - (species containing) two sulfur atoms <br> - (ion with) $1+$ charge | Penalise isotopes other than ${ }^{32}$ S once only $\text { eg } \mathrm{S}_{2} / \mathrm{S}-\mathrm{S}$ <br> Allow SS / S, S <br> Ignore incorrect charge, including negative charge <br> M2 dependent on an ion containing sulfur only $\begin{aligned} & \mathrm{S}_{2}^{+} /\left[\mathrm{S}-\mathrm{S}^{+} / \mathrm{SS}^{+} / \mathrm{S}, \mathrm{~S}^{+}\right. \text {scores (2) } \\ & \mathrm{S}_{4}^{2+} /\left[\mathrm{S}_{2}-\mathrm{S}_{2}\right]^{2+} / \mathrm{S}_{2} \mathrm{~S}_{2}^{2+} / \mathrm{S}_{2}^{+} \mathrm{S}_{2}^{+} / \mathrm{S}_{2}^{+}, \mathrm{S}_{2}^{+} \text {scores (1) } \end{aligned}$ | 2 |

| Question Number | Answer | Additional guidance |  | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 19(a) | A completed table showing: | Mark all points independently |  | 3 |
|  |  | Number of bond pairs around N atom | 3 |  |
|  |  | Number of lone pairs around N atom | 1 |  |
|  | - correct $\mathrm{Cl}-\mathrm{N}-\mathrm{Cl}$ bond angle | CI-N-Cl bond angle | $\underline{107^{(0)}}$ <br> Allow $106^{(0)}-108^{(0)}$ |  |
|  | - correct name of shape (1) | Name of shape of molecule | (Trigonal) pyramidal <br> Allow pyramid Ignore tetrahedral Do not award bipyramidal |  |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 19(b)(i) | An explanation that makes reference to the following points: <br> - strong(er) (electrostatic) attraction between ions (in $\mathrm{PCl}_{5}$ ) <br> - (than) weak intermolecular forces (in $\mathrm{SbCl}_{5}$ ) | Mark M1 and M2 independently <br> Ignore reference to solid/liquid <br> Allow strong ionic bonds / strong ionic lattice Allow strong attraction between positive and negative charges <br> Allow strong attraction between cations and anions / $\mathrm{PCl}_{4}{ }^{+}$and $\mathrm{PCl}_{6}{ }^{-}$ <br> Ignore just $\mathrm{PCl}_{5}$ is (giant) ionic <br> Do not award reference to $\mathrm{PCl}_{5}$ molecules/ intermolecular forces <br> Do not award reference to breaking of covalent bonds <br> Accept just London/van der Waals/dispersion/ temporary-induced dipole/instantaneousinduced dipole forces Ignore just $\mathrm{SbCl}_{5}$ is (simple) molecular Do not award reference to breaking of covalent/ionic bonds <br> Ionic bonding is stronger than intermolecular forces scores (2) | 2 |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 19(c)(i) | - suitable description of a dative covalent bond | For credit to be awarded, it must be clear that: <br> i) a pair of / two electrons are involved <br> ii) these electrons are shared/bonding <br> iii) these electrons come from the same atom <br> eg shared electrons in which both electrons come from the same atom <br> eg lone pair/full orbital from one atom overlaps with empty orbital of another <br> Allow element for atom <br> Allow just both electrons in the bond come from the same element <br> Allow one element donates/gives/shares both electrons to the bond <br> Allow one atom shares both electrons <br> Do not award just one atom donates/gives both electrons (or any reference to ions being formed) <br> Do not award ion/molecule/species for atom | 1 |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 19(c)(ii) | - two correct dative covalent bonds shown as arrows |  <br> Ignore lone pairs shown on Cl <br> Do not award dative bonds from any other Cl atoms | 1 |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 19(d) | An answer that makes reference to one of the following points: <br> - no 2d orbitals <br> or (nitrogen) cannot expand its octet <br> or <br> - (nitrogen is) too small (to bond to 5 atoms) <br> or <br> - repulsion between electron pairs would be too great | Accept reverse arguments <br> Allow no d orbitals as only two (quantum) shells <br> Allow no d orbitals (accessible) <br> Allow (nitrogen) cannot have more than eight electrons <br> in its outer shell <br> Ignore just cannot expand its outer/valence shell <br> Ignore just nitrogen obeys the octet rule <br> Ignore just (nitrogen has a) very small/smallest atomic radius <br> Ignore Cl atoms too large <br> Ignore nitrogen has fewest/only two shells <br> Ignore just repulsion between electron pairs <br> Ignore repulsion between Cl atoms <br> Ignore not enough room for 5 electron pairs | 1 |

(Total for Question 19 = 10 marks)

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 20(a) | - balanced equation with $\mathbf{1} \mathbf{~ m o l ~} \mathrm{C}_{3} \mathrm{H}_{6}$ and correct products (1) <br> - state symbols | Example of equation: $\mathrm{C}_{3} \mathrm{H}_{6}(\mathrm{~g})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})+\mathrm{CO}(\mathrm{~g})+\mathrm{C}(\mathrm{~s})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ <br> Allow structural, displayed or skeletal formulae <br> Allow $\mathrm{H}_{2} \mathrm{O}$ (g) <br> Do not award $\mathrm{H}_{2} \mathrm{O}(\mathrm{aq})$ <br> M2 dependent on correct species for the incomplete combustion of any $\mathrm{C}_{n} \mathrm{H}_{2 n} / \mathrm{C}_{n} \mathrm{H}_{2 n+2}$ hydrocarbon forming $\mathrm{CO}_{2}(\mathrm{~g}), \mathrm{CO}(\mathrm{g}), \mathrm{C}(\mathrm{s})$ and $\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) /(\mathrm{g})$ <br> If no other mark awarded, a correctly balanced equation, with correct state symbols, for the incomplete combustion of propene scores (1) $\mathrm{eg} \mathrm{C}_{3} \mathrm{H}_{6}(\mathrm{~g})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 3 \mathrm{CO}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{I}) /(\mathrm{g})$ <br> eg $2 \mathrm{C}_{3} \mathrm{H}_{6}(\mathrm{~g})+7 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})+4 \mathrm{CO}(\mathrm{g})+6 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) /(\mathrm{g})$ | 2 |

| Question Number | Answer |  | Additional guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 20(b) | - both solutions decolourise / turn colourless <br> - from purple with (potassium) manganate((VII))/KMnO4/ $\mathrm{MnO}_{4}^{-}$ <br> and from orange with (aqueous) bromine/ $\mathrm{Br}_{2}$ |  | Ignore any reference to breaking of the C=C bond / <br> type of reaction <br> Ignore any reference to layers / effervescence <br> Ignore any reference to reaction products / <br> formation of solids <br> Ignore turn clear / change colour <br> Allow pink for purple or any combination of purple/pink <br> Allow yellow or brown for orange or any combination of orange/yellow/brown Do not award any mention of red (eg red-brown) <br> If neither M1 nor M2 awarded, either of the following scores (1): (potassium) manganate((VII))/KMnO4/ $\mathrm{MnO}_{4}^{-}$ decolourises from purple/pink or <br> bromine decolourises from orange/yellow/brown | 2 |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 20(c) | - poly(propene) structure containing two repeat units with extension bonds | Example of diagram: <br> Accept $\mathrm{CH}_{3}$ groups on same or opposite sides <br> Allow head-to-head and tail-to-tail configurations eg <br> Allow displayed, structural, skeletal formulae or any combination of these <br> Ignore connectivity of vertical $\mathrm{C}-\mathrm{CH}_{3}$ bond <br> Ignore brackets and ' n ' | 1 |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 20(d)(i) | - correct dipole | Example of correct diagram: $\begin{array}{ll} \delta+ & \delta- \\ \mathrm{Br} & \mathrm{Cl} \end{array}$ <br> Allow correct indication of net dipole moment: <br> Ignore horizontal arrow from Br to Cl , on or above the bond <br> Ignore bond pair electrons on diagram <br> Ignore lone pairs on $\mathrm{Br} / \mathrm{Cl}$ <br> Ignore electron density map <br> Ignore double-headed curly arrow from bond to Cl <br> Do not award full charges | 1 |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 20(d)(ii) | A mechanism showing: <br> - curly arrow from $\mathrm{C}=\mathrm{C}$ bond to ( $\delta+$ )halogen <br> and <br> curly arrow from $\mathrm{Br}-\mathrm{Cl}$ bond to ( $\delta-$ )halogen or just beyond <br> (1) <br> - secondary carbocation <br> - curly arrow from lone pair on halide ion to $\mathrm{C}^{(+)}$ <br> and <br> correct product | Example of mechanism: <br> Allow displayed, structural, skeletal formulae or any combination of these <br> Penalise incorrect propene structure once only <br> Penalise half-headed curly arrows once only <br> Allow primary carbocation for mechanism involving ethene only <br> Allow curly arrow from lone pair to positive charge <br> Do not award $\delta$ - on halide ion | 3 |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 20(e) | A mechanism showing: <br> - curly arrow from $\mathrm{C}=\mathrm{C}$ bond to $\mathrm{H}^{+}$ <br> - curly arrow from lone pair on water to $\mathrm{C}^{+}$ <br> - correct structure for propan-2-ol <br> and <br> $\mathrm{H}^{+}$(catalyst regenerated) | Example of correct mechanism: <br> Do not award any additional curly arrows from/to/on propene/ $\mathrm{H}^{+}$ <br> Allow curly arrow from lone pair to positive charge Do not award any additional curly arrows shown in this step <br> Allow any combination of displayed/structural/skeletal formulae Ignore atom connectivity except displayed C-H-O Ignore any additional curly arrows added to the central intermediate | 3 |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 21(a) | Any two from the following: <br> - chemically stable / inert / does not (easily) oxidise (1) <br> - colourless <br> - odourless <br> - non-toxic / non-irritant <br> - hydrophobic / immiscible with water <br> - hypoallergenic | Ignore any reference to: <br> carbon chain length <br> intermolecular forces <br> melting/boiling temperature <br> flammability/volatility <br> liquid/moisturising/softening/lubricating/hydrating <br> spreads easily/absorbed easily <br> natural/in human skin <br> cheap <br> Allow unreactive / not very reactive / long shelf life / durable / does not breakdown (easily) <br> Ignore just stable <br> Ignore transparent/clear <br> Allow not harmful / non-hazardous / non-corrosive Ignore safe <br> Allow insoluble <br> Ignore oily | 2 |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :---: |
| 21(b) | $\bullet \mathrm{C}_{30} \mathrm{H}_{62}$ | Accept $\mathrm{H}_{62} \mathrm{C}_{30}$ | $\mathbf{1}$ |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :---: |
| 21(c)(i) | $\bullet$ nickel | Accept palladium or platinum <br> Allow correct symbol | $\mathbf{1}$ |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( c ) ( i i )}$ | $\bullet 0.00001 /(1 \times) 10^{-5}(\mathrm{~g})$ | Example of calculation: <br> mass $=\frac{50}{} \times 0.2=0.00001(\mathrm{~g})$ <br> $10^{6}$ <br> Do not award incorrect unit |  |
|  |  | Accept $10 \mu \mathrm{~g} / 0.01 \mathrm{mg}$ <br> Allow answer as fraction <br> $10^{5}$ | $\mathbf{1}$ |
|  |  | Ignore SF <br> Correct answer with no working scores (1) |  |

| 21(c)(iii) cont | Alternative route to M2, M3 and M4 <br> - rearrangement of ideal gas equation <br> - evaluation to give volume of squalene <br> - evaluation of volume ratio <br> and <br> number of $C=C$ bonds per molecule of squalene | Example of calculation: $\begin{aligned} & V=\mathrm{nRT} \\ & \text { or } p \\ & V=\frac{8500 \times 8.31 \times 473}{4.0 \times 10^{5}} \end{aligned}$ <br> $V($ squalene $)=83.52589\left(\mathrm{~m}^{3}\right)$ <br> Ignore SF except 1 SF <br> TE on temperature <br> M3 dependent on correct use of ideal gas equation $\begin{gathered} V\left(\mathrm{H}_{2}\right): V(\text { squalene }) \\ 500: 83.52589 \\ 6: 1 \end{gathered}$ <br> 6 ( $\times \mathrm{C}=\mathrm{C}$ bonds per molecule) <br> TE on $V$ (squalene) provided $V$ (squalene) < $500\left(\mathrm{~m}^{3}\right)$ and answer is rounded to nearest integer |
