Mark Scheme (Results)

October 2021

Pearson Edexcel International Advanced
Subsidiary Level
In Chemistry (WCH11)
Paper 01: Structure, Bonding and Introduction to Organic Chemistry

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere
Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## Using the mark scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.
/ means that the responses are alternatives and either answer should receive full credit. ( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.

Phrases/words in bold indicate that the meaning of the phrase or the actual word is essential to the answer. ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities. Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

## Section A

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 ( a )}$ | The only correct answer is C (10) | (1) |
|  | $\boldsymbol{A}$ is incorrect because this is the ratio by mass |  |
|  | B is incorrect because in the mass ratio the unit of kg has been ignored and this is based on 10 mg of sulfur in 1 g of fuel |  |
| $\boldsymbol{D}$ is incorrect because this is based on 10 g of sulfur in 1 kg of fuel |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 ( b )}$ | The only correct answer is $\mathbf{A}\left(0.024 \mathrm{dm}^{3}\right)$ | (1) |
|  | $\boldsymbol{B}$ is incorrect because the molar mass of sulfur has not been taken into account |  |
| C is incorrect because the mass ratio has been ignored |  |  |
|  | D is incorrect because the units of mg have been ignored |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{2}$ | The only correct answer is $\mathbf{D}\left(\mathrm{Cl}^{+}(\mathrm{g}) \rightarrow \mathrm{Cl}^{2+}(\mathrm{g})+\mathrm{e}^{-}\right)$ <br> $\boldsymbol{A}$ is incorrect because the equation represents an electron is added to an ion rather than being removed <br>  <br>  <br> $\boldsymbol{B}$ is incorrect because the equation represents electrons being added to an atom <br> C incorrect because one electron is being removed from each of two atoms |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 3(a) | The only correct answer is B (electrons are removed from molecules or atoms and positive ions are formed) | (1) |
|  | $\boldsymbol{A}$ is incorrect because the sample has been vaporised previously |  |
| C is incorrect because electrons are not added to atoms (in this mass spectrometer) |  |  |
|  | $\boldsymbol{D}$ is incorrect because acceleration occurs in region $\boldsymbol{S}$ |  |$\quad$.

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{3 ( b )}$ | The only correct answer is A (ions with a greater mass have a smaller deflection) | (1) |
|  | $\boldsymbol{B}$ is incorrect because ions with a greater mass have a smaller deflection |  |
|  | C is incorrect because ions with a greater charge have a greater deflection |  |
| $\boldsymbol{D}$ is incorrect because ions are not speeded up in a magnetic field |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 4(a) | The only correct answer is B (0.029) | (1) |
|  | $\boldsymbol{A}$ is incorrect because this is just the number of moles of sodium |  |
|  | $\mathbf{C}$ is incorrect because this assumes the number of moles of sodium is 0.1 |  |
|  | $\mathbf{D}$ is incorrect because this is the concentration in $g \mathrm{dm}^{-3}$ |  |

| Number |  |  |
| :--- | :--- | :--- |
| $\mathbf{4 ( b )}$ | The only correct answer is A (120) | (1) |
|  | $\boldsymbol{B}$ is incorrect because the mole ratio of 1:1 has been used |  |
| $\boldsymbol{C}$ is incorrect because the mole ratio has been taken as 2:1 rather than 1:2 |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 4(c) | The only correct answer is $\mathbf{A}\left(\mathrm{H}^{+}(\mathrm{aq})+\mathrm{OH}^{-}(\mathrm{aq}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l})\right)$ <br> $\boldsymbol{B}$ is incorrect because the water has been ignored <br> $\boldsymbol{C}$ is incorrect because the sulfuric acid has not been shown as ions <br> $\boldsymbol{D}$ is incorrect because all the ions are shown but none are cancelled | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 4(d) | The only correct answer is A (29.1 \%) | (1) |
|  | B is incorrect because this is the percentage ratio of magnesium hydroxide to sodium sulfate |  |
|  | $\boldsymbol{C}$ is incorrect because this is the percentage ratio of magnesium hydroxide to magnesium sulfate |  |
|  | $\boldsymbol{D}$ is incorrect because this is the percentage mole ratio of the product |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{5}$ | The only correct answer is $\mathbf{C}\left(\mathrm{N}^{3->} \mathrm{O}^{2-}>\mathrm{F}^{-}\right)$ | (1) |
|  | A is incorrect because the size of positive ions decreases across Period 3 |  |
| B is incorrect because the size of positive ions increases down Group 1 |  |  |
| D is incorrect because the size of negative ions increases down Group 6 |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{6}$ | The only correct answer is C (d) | (1) |
|  | A is incorrect because the s block elements don't form stable 3+ ions |  |
|  | B is incorrect because the elements which form stable 3+ ions do not have 21 electrons |  |
|  | D is incorrect because elements in the fblock have more than 21 electrons |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 7(a) | The only correct answer is C (392.0) | (1) |
|  | $\boldsymbol{A}$ is incorrect because the brackets have been ignored |  |
| $\boldsymbol{B}$ is incorrect because the mass of water has been omitted |  |  |
| $\boldsymbol{D}$ is incorrect because the iron has been doubled |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 7(b) | The only correct answer is D (ionic, covalent and dative covalent) | (1) |
|  | $\boldsymbol{A}$ is incorrect because there are both dative covalent and covalent bonds within the ions |  |
| B is incorrect because there are dative covalent bonds within the ions |  |  |
| C is incorrect because there are covalent bonds within the ions |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| 7(c) | The only correct answer is C $\left(3.01 \times 10^{23}\right)$ | (1) |
|  | $\boldsymbol{A}$ is incorrect because only one ammonium, one iron and one sulfate ion have been included |  |
| $\boldsymbol{B}$ is incorrect because the iron ions have not been included |  |  |
| $\boldsymbol{D}$ is incorrect because the water molecules have been included |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{8}$ | The only correct answer is $\mathbf{B}(\mathrm{Li}<\mathrm{Be}<\mathrm{B}<\mathrm{C})$ | (1) |
|  | $\boldsymbol{A}$ is incorrect because the melting temperatures of Group 7 elements increase going down the group |  |
| C is incorrect because the melting temperatures of Group 1 elements decrease going down the group |  |  |
|  | $\boldsymbol{D}$ is incorrect because silicon has the highest melting temperature in Period 3 |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{9}$ | The only correct answer is B (polar, non-polar) | (1) |
|  | $\boldsymbol{A}$ is incorrect because the $S F_{6}$ molecule is non-polar |  |
| $\boldsymbol{C}$ is incorrect because the S-F bond is polar and the $S F_{6}$ molecule is non-polar |  |  |
| $\boldsymbol{D}$ is incorrect because the S-F bond is polar |  |  |

| Question Number | Answer | Mark |
| :---: | :---: | :---: |
| 10(a) | The only correct answer is $\mathrm{B}(\mathrm{c}-\mathrm{l})$ <br> A is incorrect because the curly arrow indicates heterolytic fission <br> C is incorrect because both arrows are full arrows rather than half arrows <br> Dis incorrect because the arrows are in the wrong direction | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 0 ( b )}$ | The only correct answer is D (HCl) | (1) |
|  | $\boldsymbol{A}$ is incorrect because ethane could be formed by the combination of two methyl radicals |  |
|  | B is incorrect because chloromethane could be formed by the combination of a methyl radical and a chlorine radical <br> C is incorrect because dichloromethane could be formed from the combination of $\mathrm{CH}_{2} \mathrm{Cl}$ radical and a chlorine radical |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 1 ( a )}$ | The only correct answer is A |  |
|  | B is incorrect because it is Z-1-chlorobut-2-ene |  |
|  | C is incorrect because it is Z-2-chlorobut-2-ene |  |
|  | D is incorrect because it is E-1-chlorobut-2-ene | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 1 ( b )}$ | The only correct answer is D (11) | (1) |
|  | $\boldsymbol{A}$ is incorrect because the C-H bonds and the sigma C-C have not been counted |  |
| $\boldsymbol{B}$ is incorrect because some of the C-H bonds have not been counted |  |  |
| C is incorrect because the C-C bond on the alkene bond has not been counted |  |  |

## Section B

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 12(a) | • $2 s^{2}$ | (1) | Ignore extra $1 s^{2}$ for both Be and Ca |
|  | • $2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2}$ | (1) | Accept $p_{x}^{2} p_{y}^{2} p_{z}^{2}$ for $p^{6}$ |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 12(b) | Answer that shows ..... <br> - 2 single covalent bonds <br> - 6 non-bonding electrons shown on chlorine | Example of correct dot-and-cross diagram: <br> Allow non-bonding electrons unpaired <br> Allow all dots or all crosses <br> Allow shared electrons on the axis of the bond <br> If Ca in place of Be Max 1 <br> Ignore line showing covalent bond <br> Ignore overlapping circles <br> Ionic bond scores 0 overall <br> Reject incorrect total number of electrons for M2 | (2) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 12(c) | - a line/covalent bond is when electron(s) come from both/each atom(s) <br> - arrow / dative covalent/ co-ordinate bond which is (a lone pair of) electrons donated from chlorine/ (only) one atom | Ignore references to attraction between bonding pair and nucleus. <br> Do not award any statement stating that the donation comes from Beryllium | (2) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 12(d) | - bond angle in $\mathrm{BeCl}_{2}(\mathrm{~g}) /$ linear is $180^{\circ}$ <br> - bond angle in $\mathrm{BeCl}_{2}(\mathrm{~s}) /$ polymeric is $109.5^{\circ}$ <br> - electron pairs/bonds repel each other to minimise repulsion <br> - 4 electron pairs/bonds in solid or 2 bonding pairs/2 bonds (no lone pairs) in gas | Ignore references to shape <br> ALLOW any bond angle between $110^{\circ}$ and $95^{\circ}$. [ $98^{\circ}$ actual value] Ignore references to shape <br> Allow to a maximum separation <br> Do not award repulsion between atoms/elements or between lone pairs <br> Ignore references to lp-lp/lp-bp repulsion | (4) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 12(e) | - correct charges shown and two chloride ions <br> - electronic configuration of all ions | Example of correct dot-and-cross diagram $\left[\begin{array}{l} x_{0} \\ : \mathrm{Cl}: \\ \cdots \end{array}\right]^{-}[\mathrm{Ca}]^{2+}\left[\begin{array}{l} x_{0} \\ \mathrm{Cl}_{0} \\ : \infty \end{array}\right]^{-}$ <br> Accept Ca with 8 electrons <br> Allow all dots or all crosses or any combination Ignore inner electron shells | (2) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 12(f) | - Beryllium is smaller /has fewer electron shells/ has a higher charge density (than calcium) <br> OR beryllium is more electronegative (than calcium) <br> - Beryllium ion/ $\mathrm{Be}^{2+}$ is more polarising (than calcium /ion $\mathrm{Ca}^{2+}$ ) <br> OR <br> calcium loses (outer) electrons more easily (than beryllium) OR difference in electronegativity between calcium and chlorine is greater (than between beryllium and chlorine) <br> - beryllium-chlorine bond has a higher degree of covalency (than calcium-chlorine bond) | Allow beryllium is more polarising than calcium <br> Accept bonding in beryllium chloride is (more) covalent/ bonding in calcium chloride is (more) ionic. M3 is dependent on either M1 or M2 being scored Allow reverse arguments throughout | (3) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 13(a)(i) | - expression for calculation of RAM of silicon <br> - answer to two decimal places | Example of calculation: $\begin{aligned} & \frac{(28 \times 92.17)+(29 \times 4.71)+(30 \times 3.12)}{100} \\ & =28.1095 \\ & =28.11 \end{aligned}$ <br> Allow units $\mathrm{g} \mathrm{mol}^{-1} / \mathrm{a} . \mathrm{m} . \mathrm{u}$ only <br> Correct answer scores 2 <br> Allow TE from incorrect expression if answer lies between 28 and 30. | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 13(a)(ii) | Some silicon atoms (of mass 28) lose two <br> electrons/have a charge of 2+ | Allow (formation of ) Si²+ <br> Do not award "atoms of mass 14" | (1) |

| Question <br> Number | Answer |  | Additional Guidance | Mark |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 13(a)(iii) | ${ }^{28} \mathrm{Si}$ | 14 | 14 |  |  |
|  |  |  |  | (1) |  |
|  | ${ }^{29} \mathrm{Si}$ | 14 | 15 |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 13(b) | - all atoms are joined together by covalent bonds/giant covalent(structure) <br> - these are strong / take a lot of energy to break (so melting temperature is very high) <br> - no electrons are free (to move)/ mobile/delocalised/ (so charge cannot be carried) | Allow correct description of covalent bond Do not award intermolecular forces/ ionic bonds/ double covalent bonds. Ignore stoichiometry even if incorrect. <br> Ignore high boiling temperature <br> Ignore no free moving ions | (3) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 13(c) | - calculation of number of moles | Example of calculation | (3) |
|  |  | $\begin{array}{lll} \frac{12}{40.1} & \frac{8.43}{28.1} & \frac{14.47}{16} \end{array}$ |  |
|  |  | OR 0.299 : 0.30 : 0.904 |  |
|  |  | $1: 1$ : 3 |  |
|  |  | $\mathrm{CaSiO}_{3}$ |  |
|  |  | Correct formula with no working scores 1 mark only TE on use of atomic numbers Incorrect symbol(s) in formula loses M3 |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 13(d) | - calculation of moles carbon dioxide <br> - conversion of temperature to K <br> - rearrangement of expression <br> - evaluation of answer in $\mathrm{cm}^{3}$ | Example of calculation: $3 \div 44=0.06818$ $273+5=278$ $\begin{aligned} & V=\frac{0.06818 \times 8.31 \times 278}{1.3 \times 10^{5}} \\ & \left(=1.2116 \times 10^{-3} \mathrm{~m}^{3}\right) \\ & =1211.6 / 1212 / 1210 / 1200\left(\mathrm{~cm}^{3}\right) \end{aligned}$ <br> TE throughout but do not award M4 for negative volume Ignore SF except 1 SF <br> Correct answer with no working scores 4 marks | (4) |

| Question <br> Number | Answer | Additional Guidance | Mark |  |
| :--- | :--- | :--- | :--- | :--- |
| 14(a) | -there is a "jump"/much bigger increase <br> between the third and fourth ionisation <br> energies <br> • (First) 3 electrons in outer shell | (1) | Accept fourth electron is removed from a different <br> (quantum) shell (which is closer to the nucleus) | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| 14(b)(i) | • the number of protons increases <br> /nuclear charge increases | (1) | (2) |
|  | - the additional electrons are in the same <br> shell/same energy level/ little additional <br> shielding from electrons | (1) | Allow "same shielding" <br> Ignore references to atomic radius even if incorrect <br> Ignore electron repulsion |

| Question <br> Number | Answer | Additional Guidance | Mark |  |
| :--- | :--- | :--- | :--- | :--- |
| 14(b)(ii) | -the first electron is removed from a (3)p <br> orbital/subshell in aluminium/(3)s <br> orbital/subshell from magnesium <br> - pelectron(s) shielded by the s electrons <br> (so requires less energy)/p energy level <br> is higher than s energy level$\quad$ (1) | Do not award 2p/2s | (2) |  |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 14(c)(i) | An answer that makes reference to <br> - delocalised /free (to move) electrons /sea of electrons <br> - attracted to (a lattice of) metal/aluminium/positive ions/cations | Allow charges up to 3+ Correct fully labelled diagram scores 2 marks Ignore attraction of electrons to nuclei | (2) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 14(c)(ii) | An answer that makes reference to two of the following: <br> - (delocalised) electrons can move/carry charge <br> - aluminium has low density/light (weight) <br> - aluminium is ductile/can be drawn into wires <br> - aluminium forms an inert/oxide layer | Allow good conductor of electricity <br> Ignore malleable, strong, heat resistant, high melting temperature. | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 4 ( d ) ( \mathbf { i } )}$ | $\mathbf{2 A I}+\mathbf{3 H} \mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{Al}_{2} \mathbf{O}_{3}+\mathbf{3 H _ { 2 }}$ | Allow multiples <br> Ignore state symbols even if incorrect | (1) |

| Question Number | Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 14(d)(ii) | An answer that makes reference to two of the following: <br> - reduces greenhouse gas emissions / carbon dioxide and which affects climate change / global warming <br> - the production of hydrogen is portable <br> - fossil fuels are non-renewable (unlike water) <br> - aluminium can be recycled | (1) <br> (1) <br> (1) <br> (1) | Allow reduces sulfur dioxide emissions and which reduces acid rain <br> Do not award references to ozone depletion, carbon neutral <br> Ignore renewable <br> Ignore landfill, atom economy, references to cost | (2) |

| Question Number | Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 15(a) | An answer that makes reference to: <br> - the mixture is boiled/vapourised/ (fractionally) distilled <br> - distillate condensing at a suitable temperature (range) is collected | (1) <br> (1) | Do not award cracking/reforming <br> Allow correct references to collecting fractions at different heights/temperatures (in the fractionating column) Allow simple descriptions of fractional distillation e.g. separated by boiling point/ temperature Do not award references to molecular mass or to melting temperature. | (2) |
| Question Number | Answer |  | Additional Guidance | Mark |
| 15(b)(i) | $\left(\mathrm{C}_{18} \mathrm{H}_{38} \rightarrow 2 \mathrm{C}_{4} \mathrm{H}_{8} \quad+\right) \mathrm{C}_{10} \mathrm{H}_{22}$ |  |  | (1) |
| Question Number | Answer |  | Additional Guidance | Mark |
| 15(b)(ii) | - cis and trans skeletal formulae <br> - 2-methylpropene | (1) <br> (1) | and <br> Allow 1 mark for three correct non-skeletal formulae Ignore bond lengths and angles | (2) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 15(c) | - correct repeat unit <br> - two repeat units and continuation bonds <br> ALLOW $\mathrm{C}_{2} \mathrm{H}_{5}, \mathrm{CH}_{2} \mathrm{CH}_{3}$ as pendant group |  <br> Ignore brackets and $n$ <br> Allow ethyl groups on C2 and C3 or C1 and C4 <br> M2 depends on M1 or near miss e.g. attachment of pendant group or use of alternative 4-carbon monomer alkene producing a valid polymer i.e. <br> poly(but-2-ene)/poly(methylpropene). <br> Do not award a dimer | (2) |

| Question <br> Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 15(d) | - energy is produced /can be used to generate electricity or heat locally <br> Or <br> prevents polymers going to landfill/storage/taking up space <br> - toxic/harmful/corrosive gases/substances may be produced <br> Or <br> particulates/soot may be produced | Allow production of hydrogen <br> Ignore non-biodegradable, non-renewable, reduces polymer waste/pollution <br> a named gas e.g. sulfur dioxide, hydrogen cyanide, dioxin without qualification is insufficient <br> Do not award references to climate change | (2) |

| Question Number | Answer | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: |
| 15(e)(i) | - volume $\mathrm{CO}_{2}$ produced <br> - volume of oxygen used <br> - total volume of gas remaining <br> Alternative method <br> - moles $\mathrm{CO}_{2}$ produced <br> - moles oxygen remaining <br> - total volume remaining | $\begin{aligned} & \text { Example of calculation: } \\ & 4 \times 35=140\left(\mathrm{~cm}^{3}\right) \\ & 6.5 \times 35=227.5 / 228\left(\mathrm{~cm}^{3}\right) \\ & \\ & 300-227.5+140\left(\mathrm{~cm}^{3}\right) \\ & =212.5 / 213\left(\mathrm{~cm}^{3}\right) \end{aligned}$ <br> Alternative method $\begin{aligned} & 35 / 24000=1.4583 \times 10^{-3} / 1.458 \times 10^{-3} / 1.46 \times 10^{-3} \\ & 1.4583 \times 10^{-3} \times 4=5.8333 \times 10^{-3} / 5.83 \times 10^{-3} \text { or } 5.84 \times 10^{-3} \text { if } \\ & \text { rounded previously } \\ & 300 / 24000=1.25 \times 10^{-2} \\ & \left(1.46 \times 10^{-3}\right) \times 6.5=9.49 \times 10^{-3} \mathrm{moles} \\ & \left(1.25 \times 10^{-2}\right)-\left(9.49 \times 10^{-3}\right)=3.01 \times 10^{-3}(\mathrm{~mol}) \\ & {\left[\left(5.83 \times 10^{-3}\right)+\left(3.01 \times 10^{-3}\right)\right] \times 24000=212.16 / 212\left(\mathrm{~cm}^{3}\right)} \end{aligned}$ <br> Allow TE throughout. <br> Correct answer with no working scores 3 marks IGNORE SF except 1 SF | (3) |

| Question Number | Answer |  | Additional Guidance | Mark |
| :---: | :---: | :---: | :---: | :---: |
| 15(e)(ii) | - carbon monoxide may be produced (incomplete combustion may occur) <br> - which is toxic/combines(irreversibly) with haemoglobin/ | (1) <br> (1) | Do not award particulates <br> M2 depends on clear link to gas produced by burning butane Ignore references to flammability of butane/global warming/greenhouse gases <br> If no other mark awarded allow 1 mark for carbon dioxide causes suffocation. | (2) |

(Total for Question 15 = 18 marks)
(Total for Section B = 60 marks) (Total for Paper = 80 marks)
