Mark Scheme (Results)

Summer 2022

Pearson Edexcel International GCSE In Further Pure Mathematics (4PM1) Paper 02R

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme - not according to their perception of where the grade boundaries may lie.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification/indicative content will not be exhaustive.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, a senior examiner must be consulted before a mark is given.
- Crossed out work should be marked unless the candidate has replaced it with an alternative response.
- Types of mark
- M marks: method marks
- A marks: accuracy marks
- B marks: unconditional accuracy marks (independent of M marks)
- Abbreviations
- cao - correct answer only
- ft - follow through
- isw - ignore subsequent working
- SC - special case
- oe - or equivalent (and appropriate)
- dep-dependent
- indep - independent
- awrt - answer which rounds to
- eeoo - each error or omission
- No working

If no working is shown then correct answers normally score full marks If no working is shown then incorrect (even though nearly correct) answers score no marks.

## - With working

If the final answer is wrong, always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.
If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks.
If a candidate misreads a number from the question. Eg. Uses 252 instead of 255; method marks may be awarded provided the question has not been simplified. Examiners should send any instance of a suspected misread to review.
If there is a choice of methods shown, then award the lowest mark, unless the answer on the answer line makes clear the method that has been used. If there is no answer achieved then check the working for any marks appropriate from the mark scheme.

- Ignoring subsequent work

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: eg. Incorrect cancelling of a fraction that would otherwise be correct.
It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect eg algebra.
Transcription errors occur when candidates present a correct answer in working, and write it incorrectly on the answer line; mark the correct answer.

- Parts of questions

Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded to another.

## General Principles for Further Pure Mathematics Marking

(but note that specific mark schemes may sometimes override these general principles)

## Method mark for solving a 3 term quadratic equation:

1. Factorisation:

$$
\begin{aligned}
& \left(x^{2}+b x+c\right)=(x+p)(x+q), \text { where }|p q|=|c| \quad \text { leading to } x=\ldots \\
& \left(a x^{2}+b x+c\right)=(m x+p)(n x+q) \text { where }|p q|=|c| \text { and }|m n|=|a| \quad \text { leading to } x=\ldots
\end{aligned}
$$

## 2. Formula:

Attempt to use the correct formula (shown explicitly or implied by working) with values for $a, b$ and $c$, leading to $x=\ldots$.
3. Completing the square:

$$
x^{2}+b x+c=0: \quad\left(x \pm \frac{b}{2}\right)^{2} \pm q \pm c=0, \quad q \neq 0 \quad \text { leading to } x=\ldots
$$

## Method marks for differentiation and integration:

1. Differentiation

Power of at least one term decreased by $1 .\left(x^{n} \rightarrow x^{n-1}\right)$
2. Integration:

Power of at least one term increased by $1 .\left(x^{n} \rightarrow x^{n+1}\right)$

## Use of a formula:

Generally, the method mark is gained by either
quoting a correct formula and attempting to use it, even if there are mistakes in the substitution of values
or, where the formula is not quoted, the method mark can be gained by implication from the substitution of correct values and then proceeding to a solution.

## Answers without working:

The rubric states "Without sufficient working, correct answers may be awarded no marks".

General policy is that if it could be done "in your head" detailed working would not be required. (Mark schemes may override this eg in a case of "prove or show...."

## Exact answers:

When a question demands an exact answer, all the working must also be exact. Once a candidate loses exactness by resorting to decimals the exactness cannot be regained.

## Rounding answers (where accuracy is specified in the question)

Penalise only once per question for failing to round as instructed - ie giving more digits in the answers. Answers with fewer digits are automatically incorrect, but the isw rule may allow the mark to be awarded before the final answer is given.

International GCSE Further Pure Mathematics - Paper 2R mark scheme

| Question number | Scheme | Marks |
| :---: | :---: | :---: |
| 1(a) | $\begin{aligned} & \overrightarrow{O B}=\overrightarrow{O A} \\ & 9 \mathbf{i}+6 \mathbf{j} \end{aligned}+\overrightarrow{A B} \quad \text { or } \quad 6 \mathbf{i}+8 \mathbf{j}=\overrightarrow{O B}-(3 \mathbf{i}-2 \mathbf{j}) \text { oe }$ | $\begin{aligned} & \text { M1 } \\ & \text { A1 } \\ & {[2]} \\ & \hline \end{aligned}$ |
| (b) | $\sqrt{6^{2}+8^{2}}$ or 10 (from Pythagorean triple) | $\begin{aligned} & \text { B1 } \\ & {[1]} \end{aligned}$ |
| (c) | ( $\pm$ ) $\frac{1}{110^{\prime \prime}}(6 \mathbf{i}+8 \mathbf{j})$ | $\begin{gathered} \text { M1 A1 } \\ {[2]} \end{gathered}$ |
| Total 5 marks |  |  |

| Part | Mark | Additional Guidance |
| :---: | :---: | :--- |
| (a) | M1 | Correct vector path written, can be implied by correct addition of vectors <br> OR correct vector statement together with correct substitution of the given <br> vectors (where $\overrightarrow{O B}$ |
|  | As not the subject) |  |$|$| $9 \mathbf{i}+6 \mathbf{j}$ |
| :--- | :---: | :--- |

| Part | Mark | Additional Guidance |
| :---: | :---: | :--- |
|  | B1 | Correct simplified expression for Volume |

| Part | Mark | Additional Guidance |
| :---: | :---: | :--- |
| (a)   <br> (i) Ignore labelling and mark parts (i) and (ii) together.  <br>  B1 One correct equation as shown. <br> This is an M mark in epen. <br>  M1 Attempts to solve simultaneously. Must be working with correct equations <br> or with $a r^{3}=5$ and $a r^{5}=\frac{5}{2}$ <br> Minimum attempt to correctly divide their equations or rearrange for $a$ and <br> equate as shown or to correctly rearrange and eliminate $r$, must achieve a <br> value for $r$ or for $a$. <br> OR attempts to solve $5 r^{2}=\frac{5}{2}$ to obtain r <br> Allow errors in arithmetic but not mathematically incorrect process. <br> A1 Value as shown. <br> Allow this mark for correct answer from working with $a r^{3}=5$ and <br> $a r^{5}=\frac{5}{2}$ <br> (ii) Must reject negative if seen. <br> isw attempt to convert to decimal. <br> (b) A1 Value as shown. <br> M1 <br> $\|r\|<1$ <br>  A1 Correctly substitutes their values for $a$ and $r$ into the formula provided |  |  |

| Question number | Scheme | Marks |
| :---: | :---: | :---: |

|  | $\left(x+\frac{3}{2}\right)^{2}+\frac{19}{4}>0$ <br> $\left(x+\frac{3}{2}\right)^{2}+\frac{19}{4}>0$ and a conclusion drawn e.g. the completed <br> square form is always greater than 0 so only one real root | A 1 |
| :--- | :--- | :---: |
|  | Total 8 marks |  |

|  | dM1 | Attempt at completing the square <br> See general guidance for what constitutes an attempt at completing the <br> square |
| :--- | :---: | :--- |
|  | A1 | Correct completed square form and draws a conclusion. <br> There must be some conclusion drawn, but it can be as simple as writing '\#' <br> or "shown". |

| Part | Mark | Additional Guidance |
| :---: | :---: | :--- |
| (a) | B1 | SC1 - allow 0.29 and/or 0.61 to be truncated to 0.28 and/or 0.60 with 1.28 <br> correct to gain this mark OR for all three values correct but given to greater <br> than 2 decimal places |
|  | B1 | For all 3 values rounded correctly as shown. |
| (b) | B1ft | ft the correct plotting of their points. |
|  | B1ft | $\mathrm{ft} \mathrm{a} \mathrm{curve} \mathrm{"sensibly"} \mathrm{plotted} \mathrm{through} \mathrm{their} \mathrm{points} need not have the correct$, <br> shape. <br> Must pass through all of the points they have plotted. Minimum 4 points. |
| (c) | M1 | Rearranges the equation must be of form e ${ }^{3 x \pm 2}=3-x$ |$|$| M1 |
| :--- |
|  |

| Part | Mark | Additional Guidance |
| :---: | :---: | :---: |
|  | B1 | Angle identified in written work or on diagram. Allow labelling to be any letters. |
|  | M1 | Denotes any side of the pyramid with $a$ and any appropriate length on the base $\frac{a}{2}$. This can be in written work or on the diagram. The two sides can be any two sides (including values) which will form a triangle with the required angle and must be used in the work that follows (even if incorrectly). <br> Allow if the candidate denotes any side of the pyramid with $a$ and identifies $A O \text { as } \frac{\sqrt{2} a}{2} \text { oe }$ |
|  | dM1 | Uses Pythagoras with a minus sign in a correct triangle with correctly labelled sides. |
|  | A1 | Correct expression for their correct choice of sides oe. |
|  | M1 | Working in triangle $V X O$ (or other valid triangle) with their values from previous working, using any appropriate trigonometry. |
|  | A1 | Awrt 54.7 |

| Question number | Scheme | Marks |
| :---: | :---: | :---: |
| 7 (a) | $\begin{array}{ll} (3 x-15=) & 30 \text { or } 330 \text { or } 390 \\ x=15 & x=115 \quad x=135 \end{array}$ | M1 M1 A1 A1 $[4]$ |
| (b) | $\begin{aligned} & 3 \frac{\sin y}{\cos y}+4 \sin y=0 \rightarrow \sin y\left(\frac{3}{\cos y}+4\right)=0 \\ & \sin y=0 \quad \text { and } \quad \cos y=-\frac{3}{4} \quad \rightarrow \quad y= \\ & y=-180,0 \\ & y=138.6,-138.6 \end{aligned}$ | M1 <br> A1ft <br> A1 <br> A1 |
|  | ALT |  |

| (c) | $\begin{aligned} & \cos \theta=3\left(1-\cos ^{2} \theta\right)-1 \rightarrow 3 \cos ^{2} \theta+\cos \theta-2=0 \\ & (3 \cos \theta-2)(\cos \theta+1) \end{aligned}$ | M1 M1 |
|  | $\theta=-180$ | A1 |
|  | $\theta=48.2,-48.2$ | A1 [4] |

Total 12 marks

| Part | Mark | Additional Guidance |
| :---: | :---: | :---: |
| (a) | M1 | For any of 30 or 330 or 390 May be implied by correct answers. |
|  | M1 | Solves a linear equation coming from attempt at use of inverse trigonometric function to obtain one value. <br> e.g. solves $3 x-15=" 30 "$ <br> First A1 for any correct value, second A1 for all 3 correct values and no others in the range. <br> Ignore values outside the range. |
| (b) | M1 | Correctly replaces the identity for $\tan y$ and attempts to deal with $\sin y$. Allow for factorising. Condone dividing through by $\sin y$. <br> Minimally acceptable attempt for factorisation is $A \sin y\left(\frac{B}{\cos y}+C\right)$ |
|  | A1ft | $\sin y=0 \quad$ and $\quad \cos y=-\frac{B}{C}$, follow through their $B$ and $C$ only. |
|  | A1 | From sine: Both values, ignore extra values out of range, A0 for extra values in range. |
|  | A1 | From cosine: Both values, ignore extra values out of range, A0 for extra values in range. $y=\text { awrt 138.6, awrt }-138.6$ |
|  | ALT |  |
|  | M1 | Correctly replaces the identity for $\tan y$ and attempts to deal with $\tan y$. Allow for factorising. Condone dividing through by $\tan y$. <br> Minimally acceptable attempt for factorisation is $A \tan y(B+C \cos y)$ |
|  | A1ft | $\tan y=0 \quad$ and $\quad \cos y=-\frac{B}{C}$, follow through their $B$ and $C$ only. |
|  | A1 | From tangent: Both values, ignore extra values out of range, A0 for extra values in range. |
|  | A1 | From cosine: Both values, ignore extra values out of range, A0 for extra values in range. $y=\text { awrt 138.6, awrt }-138.6$ |
| (c) | M1 | Correctly uses the identity for $\cos ^{2} \theta$ and rearranges to get a 3TQ <br> Minimally acceptable attempt is $\pm 3 \cos ^{2} \theta \pm \cos \theta \pm 2=0$ |
|  | M1 | Solves a 3 TQ to arrive at 2 distinct values for $\cos \theta$. See general guidance. |
|  | A1 | For - 180, ignore extra values out of range, A0 for extra values in range. |
|  | A1 | Both values, ignore extra values out of range, A0 for extra values in range. $\theta=\text { awrt } 48.2, \text { awrt }-48.2$ |

| Part | Mark | Additional Guidance |
| :---: | :---: | :---: |
| Mark parts (i) and (ii) together. |  |  |
| (a)(i) | M1 | For equating the two equations. |
|  | M1 | For multiplying through by $\mathrm{e}^{3 x}$, minimum of 2 out of 4 correct terms. (presence of $\pm 10 \mathrm{e}^{3 x}$ indicates 2 correct terms). |
|  | A1*cso | Correct solution only, no errors or omissions. |
| (ii) | M1 | Minimally acceptable attempt at solving the equation leading to $\mathrm{e}^{3 x}=$ See general guidance, if the formula is quoted allow up to two slips in substitution, otherwise the substitution must be correct. |
|  | A1*cso | Correct solution only, no errors or omissions. If 0 also included then this should be rejected. |
| (b) | M1 ${ }_{1}$ | For attempt to integrate one of: $9-9 \mathrm{e}^{-3 x} \text { or } \mathrm{e}^{3 x}-1 \text { or } \pm\left[\left(9-9 \mathrm{e}^{-3 x}\right)-\left(\mathrm{e}^{3 x}-1\right)\right]$ <br> Limits may not be present. <br> At least one term correct. Ignore +c if included. |
|  | $\mathrm{Al}_{2}$ | For correct integration of one of the exponential terms $\pm 9 \mathrm{e}^{-3 x} \rightarrow \mp \frac{9}{3} \mathrm{e}^{-3 x}$ or $\pm \mathrm{e}^{3 x} \rightarrow \pm \frac{1}{3} \mathrm{e}^{3 x}$ <br> Limits need not be present. Ignore +c if included. |
|  | $\mathrm{Al}_{3}$ | For correct integration of both curves $9 x+3 e^{-3 x} \text { and } \frac{e^{3 x}}{3}-x$ <br> or for a fully correct integration where the difference between two expressions is found $\pm\left(10 x-\frac{9}{-3} e^{-3 x}-\frac{e^{3 x}}{3}\right) \quad \text { or } \quad \pm\left(9 x-\frac{9}{-3} e^{-3 x}-\frac{e^{3 x}}{3}+x\right)$ <br> Note: this is an M mark in epen |
|  | M14 | For the difference between the two expressions either before or after integration. <br> Allow subtraction either way around. <br> Note: this is an A mark in epen |
|  | dM15 | Substitution of correct limits into their integrated expressions (limits subtracted the correct way around). <br> Dependent on first M scored. <br> If substituting before difference found then must substitute into both integrated expressions. <br> May be implied by awrt 1.99 <br> If integration is not correct then substitution must be shown. |
|  | A1 ${ }_{6}$ | For the correct answer oe. Must be exact value. |

|  | If a candidate gives no response to (a) and/or (b) but shows the correct answers on the graph we will award the marks. Where answers are given in (a) and/or (b) these should be marked as they stand with no reference to the graph. Ignore labelling of (i) and (ii) and mark (a) together. |  |
| (a)(i) | B1 | For $x=\frac{3}{2}$ oe |
| (a)(ii) | B1 | For $y=\frac{7}{2}$ oe |
| (b) | B1 B1 | First B1 for either correct, second B1 for both correct Condone if not given as coordinates e.g. $x=\frac{2}{7}$ and/or $y=\frac{2}{3}$ given |
| (c) | M1 | Attempt the quotient rule. Numerator must be the difference of two terms (either way round) of the form $A .(2 x-3)-B .(7 x-2), A$ and $B>1$. <br> Denominator must be of the form $(2 x-3)^{2}$ |
|  | A1 | Either term on the numerator correct (either way round), dependent on previous method mark. |
|  | A1 | $\text { Obtains } \frac{-17}{(2 x-3)^{2}} \text { or } \frac{-17}{4 x^{2}-12 x+9}$ |
|  | B1 | Correct conclusion based on correct working only, for example, (the numerator is a negative number and) the denominator is always positive and therefore the fraction/gradient is always negative. |
|  | ALT - product rule |  |
|  | M1 | For an attempt at Product Rule. <br> Must be a sum of two products. <br> Must have the form <br> $c(2 x-3)^{-1}+d(7 x-2)(2 x-3)^{-2}$ for constants $c, d$. |
|  | A1 | Either term correct, dependent on previous method mark. |
|  | A1 | $\text { Obtains } \frac{-17}{(2 x-3)^{2}} \text { or } \frac{-17}{4 x^{2}-12 x+9}$ |
|  | B1 | Correct conclusion based on correct working only, for example, (the numerator is a negative number and) the denominator is always positive and therefore the fraction/gradient is always negative. |
| (d) | B1 | Two branches drawn in the correct two "quadrants" created by the two aymptotes. Mark intention, allow poor curves, but do not allow the curve to bend back on itself or touch any asymptotes. <br> Allow BOD if intention is for curve to run alongside asymptote but there is a slight deviation back on itself. |
|  | B1ft | Two clearly marked asymptotes, ft their (a), labelled as described, there must be one section of the curve present, tending towards these asymptotes. |
|  | B1ft | Two clearly labelled intersections with the axes, ft their (b), at least one section of their curve must pass through one of these intersections. Intersections must be labelled correct way around. If additional intersections seen then B0 |
| (e) | M1 | $\text { Sets their differentiated function from part }(\mathrm{c})=-\frac{1}{17}$ |
|  | dM1 | Rearranges to get to an equation of the form shown with no denominators or a 3TQ and solves using an acceptable method to obtain $x=\ldots$. Dependent on previous method mark |
|  | A1 | Correct values for point A ( 10,4 ) |
|  | M1 | Uses their values for $x$ and $y$ (from an attempt at working with gradient of the curve) with gradient 17 to find an equation for $l$ (if using $y=m x+c$, must be a complete method arriving at $c=$ ) If correct $c=-166$. |
|  | A1 | Correct equation, any form |

|  | M1 | Sets their equation for the normal equal to the curve, makes a correct <br> rearrangement to remove any denominator and forms a 3TQ <br> Note this method mark is not dependant. |
| :---: | :---: | :--- |
|  | A1 | Correct exact values for $x$ and $y$ |

| Question number | Scheme | Marks |

|  |  | 12 marks |

| Part | Mark | Additional Guidance |
| :---: | :---: | :---: |
| (a) | M1 | Correct expression for the surface area of the cylinder and an attempt to rearrange to $h=$ or $\pi r h=$ <br> Allow errors in arithmetic but not mathematically incorrect process. $\pi r h$ may be embedded, e.g. $300=\pi r^{2}+\pi r h$ becoming $300=\pi r^{2}+V$ would score M1A1M1 and may score full marks if correct final result obtained. |
|  | A1 | cao |
|  | M1 | Substitutes their expression for height or their expression for $\pi r h$ into a correct expression for the volume. |
|  | A1 | cso no errors or omissions, must state $V=$ |
|  | Mark parts (i) and (ii) together. |  |
| (b) <br> (i) | M1 | Minimally acceptable attempt at differentiation, see general guidance, no power to increase. |
|  | M1 | Places their derivative $=0$ and attempts to rearrange to find $r$. Minimally acceptable derivative is of the form $a \pm b \pi r^{2}$ |
|  | A1 | Correct value for $r$, exact value only. <br> Must reject negative value if found, award A0 if not rejected. |
| (ii) | M1 | Minimally acceptable attempt to differentiate their first derivative, see general guidance, no power to increase. Or testing gradients or a sketch. |
|  | A1 | Correct evaluation of second derivative or explanation of why second derivative is negative. Conclusion this value of $r$ gives a maximum. No incorrect work. |
| (c) | M1 | Correct substitution of their $r$ into the expression for $V$. |
|  | dM1 | Attempts rearrangement using the formula for volume of a sphere to make $p^{3}$ the subject <br> Correct order of operations applied to right hand side. Accept arithmetic slips. |
|  | A1 | $\begin{aligned} & p=6.5 \\ & \text { Accept awrt } 6.5 \\ & \hline \end{aligned}$ |
