1 The diagram shows the electronic configurations of six different atoms.

(a) You may use the Periodic Table on page 2 to help you answer this question. Answer each part by writing one of the letters A, B, C, D, E or F in the box provided. You may use each letter once, more than once or not at all. Give the letter that represents an atom (6) (i) of a noble gas (ii) that contains three protons (iii) of phosphorus (iv) of an element in Group 4 of the Periodic Table (vi) with a full outer shell of electrons (b) Atoms of A and D combine to form a compound containing covalent bonds. (i) Complete the sentence to describe a covalent bond. A covalent bond is the electrostatic attraction between a pair of and the of two atoms. (ii) Suggest, with reference to electronic configurations, the most likely formula of the compound formed between atoms of A and D.			Α	В	C	D	E	F	
Answer each part by writing one of the letters Å, B, C, D, E or F in the box provided. You may use each letter once, more than once or not at all. Give the letter that represents an atom (6) (i) of a noble gas (ii) that contains three protons (iii) of phosphorus (iv) of an element in Group 4 of the Periodic Table (v) of an element in Period 3 of the Periodic Table (vi) with a full outer shell of electrons (b) Atoms of A and D combine to form a compound containing covalent bonds. (i) Complete the sentence to describe a covalent bond. A covalent bond is the electrostatic attraction between a pair of and the of two atoms. (ii) Suggest, with reference to electronic configurations, the most likely formula of the compound formed between atoms of A and D.									
(i) of a noble gas (ii) that contains three protons (iii) of phosphorus (iv) of an element in Group 4 of the Periodic Table (v) of an element in Period 3 of the Periodic Table (vi) with a full outer shell of electrons (b) Atoms of A and D combine to form a compound containing covalent bonds. (i) Complete the sentence to describe a covalent bond. A covalent bond is the electrostatic attraction between a pair of and the of two atoms. (ii) Suggest, with reference to electronic configurations, the most likely formula of the compound formed between atoms of A and D.	(a)	Ans pro You	swer each ovided. u may use	part by writi	ng one of the	e letters A, B, C, land once or not a	D, E or F in the		
(ii) that contains three protons (iii) of phosphorus (iv) of an element in Group 4 of the Periodic Table (v) of an element in Period 3 of the Periodic Table (vi) with a full outer shell of electrons (b) Atoms of A and D combine to form a compound containing covalent bonds. (i) Complete the sentence to describe a covalent bond. (2) A covalent bond is the electrostatic attraction between a pair of and the of two atoms. (ii) Suggest, with reference to electronic configurations, the most likely formula of the compound formed between atoms of A and D.		GIV	e the lette	i tilat lepies	erits ari atom				(6)
(iii) of phosphorus (iv) of an element in Group 4 of the Periodic Table (v) of an element in Period 3 of the Periodic Table (vi) with a full outer shell of electrons (b) Atoms of A and D combine to form a compound containing covalent bonds. (i) Complete the sentence to describe a covalent bond. (2) A covalent bond is the electrostatic attraction between a pair of and the of two atoms. (ii) Suggest, with reference to electronic configurations, the most likely formula of the compound formed between atoms of A and D.		(i)	of a nobl	le gas					
(iv) of an element in Group 4 of the Periodic Table (v) of an element in Period 3 of the Periodic Table (vi) with a full outer shell of electrons (b) Atoms of A and D combine to form a compound containing covalent bonds. (i) Complete the sentence to describe a covalent bond. (2) A covalent bond is the electrostatic attraction between a pair of and the of two atoms. (ii) Suggest, with reference to electronic configurations, the most likely formula of the compound formed between atoms of A and D.		(ii)	that con	tains three pr	rotons				
(v) of an element in Period 3 of the Periodic Table (vi) with a full outer shell of electrons (b) Atoms of A and D combine to form a compound containing covalent bonds. (i) Complete the sentence to describe a covalent bond. (2) A covalent bond is the electrostatic attraction between a pair of and the first of two atoms. (ii) Suggest, with reference to electronic configurations, the most likely formula of the compound formed between atoms of A and D.		(iii	i) of phosp	horus					
(vi) with a full outer shell of electrons (b) Atoms of A and D combine to form a compound containing covalent bonds. (i) Complete the sentence to describe a covalent bond. 2	his question is about hydrogen (H ₂) and water.	
	a) Hydrogen is a gas at room temperature. It exists as simple molecules.	
	(i) Draw a dot and cross diagram to show the arrangement of the electrons in a hydrogen molecule.	(1)
	(ii) Explain why hydrogen has a very low boiling point.	(2)
	o) The symbols for the three isotopes of hydrogen are	
	¹ H ² H ³ H	
	(i) State what is meant by the term isotopes .	(2)
	(ii) Complete the table to show the number of protons, neutrons and electrons in each of the three isotopes of hydrogen.	(3)
	Isotope	
	¹ H ² H ³ H	
	number of protons	

number of neutrons

number of electrons

(c)	Wh	When hydrogen burns in oxygen, heat energy is transferred to the surroundings.									
	(i)	State the name given to a reaction in which heat energy is transferred to the surroundings.	(1)								
	(ii)	Write a chemical equation to represent the reaction that takes place when hydrogen burns in oxygen.	(2)								
	(iii)	Describe a chemical test to show that the product is water.	(2)								
	(iv)	Describe a physical test to show that the product is pure water.	(2)								
		(Total for Question 2 = 15 ma	rks)

- 3 This question is about bonding, structures and properties.
 - (a) The box gives four types of structure.

The table shows some properties of four substances, A, B, C and D.

Complete the table by giving the correct type of structure for each substance.

You may use each structure once, more than once or not at all.

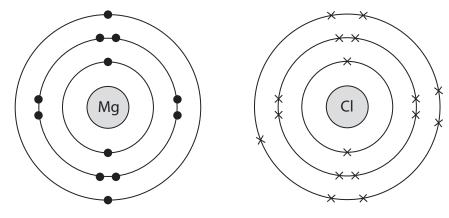

(4)

Substance	Electrical conductivity M		Melting	Turns of structure
Substance	of the solid	of the liquid	point	Type of structure
A	poor	poor	low	
В	poor	poor	high	
С	good	good	high	
D	poor	good	high

(b) Magnesium chloride (MgCl₂) is an ionic compound.

The diagram shows the electronic configurations of atoms of magnesium and chlorine.

(i) Describe how magnesium atoms and chlorine atoms form magnesium ions and chloride ions.

(ii) Draw a diagram to represent the electronic configurations of each of the ions in magnesium chloride.

Show the charge on each ion.

(3)

(3)

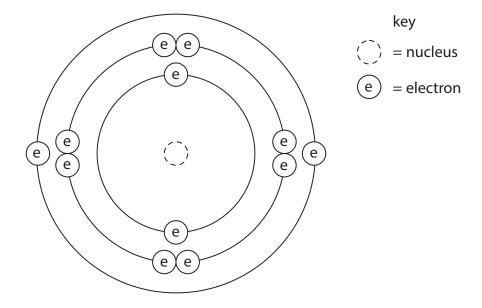

Complete the diagram, using dots and crosses, to show the arrangement of the

(c) A molecule of carbon dioxide contains double covalent bonds.

•	outer electrons in a	a molecule of ca	arbon dioxi	de.				
		Ο		C		Ο		
							(2)	
(d)	Indium is a metal ir	n Group 3 of the	e Periodic T	able.				
	(i) Describe the st	ructure and bor	nding in ind	dium.			(3)	
								••••
								••••
	(ii) Explain why inc	dium is malleab	ole.					
	•						(2)

4 The diagram shows the electronic configuration of an atom of element X.

(a)	(i)	How many	, protons	does the	nucleus	of the atom	contain?
(a)	(1)	TIOW IIIaiiy	/ protoris	uoes trie	Hucieus	or the atom	COIIIaiii:

(1)

(ii) Which group of the Periodic Table contains element X?

Give a reason for your choice.

(2)

(iii) Give the formula of the ion formed by element X in its compounds.	
	(1)

For more awesome GCSE and A level resources, visit us at www.savemyexams.co.uk/

(b) Element X has three isotopes.

The table gives the mass number of each isotope and its percentage abundance in a sample of element X.

Mass number	Percentage abundance (%)
24	79.0
25	10.0
26	11.0

Calculate the relative atomic mass (A_r) of element X.

Give your answer to one decimal place.

(3)

relative atomic mass of X =

(Total for Question 4 = 7 marks)

5 Boron is an element in Group 3 of the Periodic Table.

An atom of boron can be represented as $^{11}_{\ 5} B$

(a) Use numbers from the box to complete the sentences about this atom of boron.

3 3 0 11 10

Each number may be used once, more than once or not at all.

(i)	The atomic number of boron is	(1
(ii)	The mass number of boron is	(1
(iii)	This atom of boron contains protons.	(1
(iv)	This atom of boron contains neutrons.	(1
(v)	This atom of boron containselectrons.	("
